PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

11 El Camino Real Property: 11 El Camino Real, San Carlos, California

Executive Summary

Arcadis U.S., Inc. (Arcadis) was retained by SummerHill Apartment Communities (SummerHill) to conduct a Phase I Environmental Site Assessment (ESA) for the CVS Pharmacy (CVS) facility located at 11 El Camino Real, San Carlos, San Mateo County, California (the Site). The Phase I ESA was performed in general accordance with the ASTM International (ASTM) Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13).

Site Layout Description

The Site consists of a 1-acre parcel that is developed with an approximately 26,000-square-foot, one-story CVS store with a partial mezzanine floor (Site building) and a 1.2-acre parcel that is developed with an asphalt-paved parking lot. The southern portion of the building is used as retail and pharmacy space and the northern portion of the building is used as warehouse and office space. The remainder of the Site consists of landscaped areas.

Operations

The Site is owned by Longs Drug Stores Inc. and operates as a drug store. Primary operations include retail sales, pharmacy, and warehousing of retail products.

Site History

The Site appeared as undeveloped and filled land from as early as 1896. No changes were evident until 1943, when the northern portion of the Site was developed with four rectangular structures and the southern portion of the Site was developed with a portion of a larger building that extended onto the south-adjacent parcel. By 1950, the northern portion of the Site was developed with one larger one-story building and two adjoining smaller one-story buildings, and the southern portion of the Site remained developed with a portion of a large, vacant commercial building. By 1970 and 1974, the buildings in the northern and southern portions of the Site had been demolished, respectively. The Site remained vacant until sometime prior to 1981, when the current Site building was constructed in the northern portion of the Site and the southern portion of the Site was developed with the current asphalt-paved parking lot. No significant changes were evident through the present.

The Site was first developed by 1950 for sign manufacturing and steel plating operations. By 1968, the buildings in the northern portion of the Site were used for carpet and boat storage, and the building along the southern portion of the Site was operated as a cabinet shop. It was unclear if the building was used for retail or manufacturing of cabinets. The current Site building was operated as Longs Drug Stores Inc. between 1986 and 2009 and by CVS from 2010 through the present.

Surrounding Area

The Site is adjoined to the north by a vacant and paved parcel, followed by F Street. Beyond F Street are the Belmont Apartments and the Neptune Society of Northern California; to the east by Caltrain railroad tracks, beyond which is Old Country Road; to the south by Jersey Joe's Cheesesteak, beyond which is Nice Nails; and to the west by El Camino Real, beyond which are a hotel building currently under construction and a multi-tenant medical office building. Land use in the surrounding area consists of commercial, light industrial, and residential properties.

Findings

Arcadis has performed a Phase I ESA of the Site in conformance with the scope and limitations of ASTM Practice E1527-13 for Phase I ESAs. This assessment has revealed the following recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), historical recognized environmental conditions (HRECs), and other environmental conditions as defined in Section 1 of this Phase I ESA Report.

Recognized Environmental Conditions

The following REC was identified in connection with the Site:

Soil and Soil Vapor Environmental Screening Level Exceedances: Multiple constituents in soil and soil vapor were detected at the Site at concentrations that exceed the San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (SF RWQCB ESLs; SF RWQCB 2019) during a Limited Phase II Site Investigation (Arcadis 2021). Several metals, chlordane, and aroclor-1260 were detected above the ESLs in soil and benzene, 1,2-dichloroethane, tetrachloroethene, and methylene chloride were detected above the SF RWQCB ESLs in soil vapor. The source of these impacts is unknown and the exceedances of the SF RWQCB ESLs is a REC. The Site was historically used for electroplating and sign manufacturing from at least 1950 until sometime prior to 1968 and several dry cleaners and gas stations have been in operation at surrounding properties since the 1980s. Specifically, Camino Cleaners (58 El Camino Real) was in operation 185 feet west of the Site from 1986 through 2005 and the current San Carlos Plaza Dry Cleaners facility (81 El Camino Real) has been in operation 260 feet south of the Site for dry cleaning services from 1991 through the present.

Controlled Recognized Environmental Conditions

No CRECs were identified in connection with the Site.

Historical Recognized Environmental Conditions

No HRECs were identified in connection with the Site.

Other Environmental Conditions

No other environmental conditions were identified in connection with the Site.

1 Introduction

Arcadis U.S., Inc. (Arcadis) was retained by SummerHill Apartment Communities (SummerHill) to conduct a Phase I Environmental Site Assessment (ESA) for the CVS Pharmacy (CVS) located at 11 El Camino Real, San Carlos, San Mateo County, California (the Site). This Phase I ESA Report has been prepared in accordance with the Revised Proposal for Environmental Consulting Services for the 11 El Camino Real Property in San Carlos, California, dated April 2, 2021.

1.1 Purpose

Arcadis understands that the purpose for conducting this Phase I ESA is to assess and document the current status of environmental impact conditions at the Site.

1.2 Scope of Work

The Phase I ESA was performed in general accordance with the ASTM International (ASTM) Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13), including the limitations outlined in the standard. The goal of the Phase I ESA was to identify recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs), and historical recognized environmental conditions (HRECs) associated with the Site.

Findings from this Phase I ESA are classified and defined as follows:

- A REC is defined in ASTM E1527-13 as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”
- A CREC is defined in ASTM E1527-13 as “a [REC] resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority... with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”
- An HREC is defined in ASTM E1527-13 as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”
- A de minimis condition is defined in ASTM E1527-13 as “a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.”
- Other environmental conditions are considered environmental issues that do not clearly fall within the ASTM definition of a REC, CREC, HREC, or de minimis condition, fall outside the scope of the ASTM practice (e.g. asbestos), or are considered a business environmental risk.

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

11 El Camino Real Property: 11 El Camino Real, San Carlos, California

As required by ASTM E1527-13, the scope of work for this Phase I ESA included the following, except as otherwise indicated as a data gap in Section 8.8 or as a deviation in Section 8.9 of this report:

- **Records review:** Arcadis contracted Environmental Data Resources, Inc. (EDR) to provide a report (EDR Report) summarizing the federal, state, tribal, and local environmental record source database listings for the Site and for the adjoining and surrounding properties within specified search radii, as well as physical setting information for the Site and surrounding area, as required by ASTM E1527-13. Arcadis also reviewed regulatory agency files and records, as deemed necessary and documented in Section 8.2 of this Report; alternate environmental information (e.g. on-site records, user-provided records); additional physical setting sources; and historical use information, as documented in Section 3.2 of this Report.
- **Site reconnaissance:** Arcadis completed a Site reconnaissance to visually observe exterior areas and accessible interior common areas and representative occupant spaces. Arcadis did not look under floors, above ceilings, or behind walls. Adjacent properties and the surrounding area were viewed from the Site and/or from publicly accessible properties or rights-of-way.
 - Ms. Divya Mehta of Arcadis performed the Site reconnaissance on May 6, 2021.
 - During the Site reconnaissance, the temperature was approximately 65° Fahrenheit, and conditions were observed to be sunny.
- **Interviews:** Arcadis interviewed Mr. Matt Beaty, Store Manager (associated with the Site for 2 months) during the Site reconnaissance. Interviews of past owners, operators, and occupants of the Site, and local government officials, are documented in Section 8.
- **Report:** This Phase I ESA Report summarizes and documents the Phase I ESA.

The scope of work for the Phase I ESA also included the following:

- A cursory visual observation for apparent wetland areas in accessible exterior areas of the Site and review of readily available wetlands information to identify wetlands that have been previously delineated and/or reported to be present on the Site.
- A cursory visual observation to identify typical suspect asbestos-containing materials (ACMs) and a review of associated documentation.

The scope of work for this Phase I ESA did not include the collection or analysis of soil, water, air, other environmental media, transformer/electrical fluids, ACMs, other building materials, or other samples.

The User of this Phase I ESA is SummerHill.

2 Site Setting and Description

2.1 Site Location

The Site is located at 11 El Camino Real, San Carlos, San Mateo County, California (**Figure 1**). The Site comprises two parcels identified by the San Mateo County Assessor's Office as Parcel Identification Numbers (PINs) 045320170 and 045320220. The Site is located southeast of the intersection of El Camino Real and F Street, within the San Carlos Plaza shopping center. Land use in the surrounding area consists of commercial, light industrial, and residential properties.

2.2 Site Layout Description

The Site consists of a 1-acre parcel that is developed with an approximately 26,000-square-foot, one-story CVS store with a partial mezzanine floor (Site building) and a 1.2-acre parcel that is developed with an asphalt-paved parking lot. The southern portion of the building is used as retail and pharmacy space and the northern portion of the building is used as warehouse and office space. The remainder of the Site consists of landscaped areas (**Figure 2**).

Photographs of the Site and surrounding areas were taken to document current conditions and are included in **Appendix A**.

2.2.1 Heating and Cooling

The building is heated by a central natural gas-fired and electric heating, ventilation, and air conditioning (HVAC) system.

2.3 Operations

The Site is owned by Longs Drug Stores Inc. and operates as a drug store. Primary operations include retail sales, pharmacy, and warehousing of retail products.

2.4 Physical Setting

2.4.1 Topography

According to information obtained from the U.S. Geological Survey (USGS) 7.5 Minute Series Topographic Map of the San Mateo, Redwood Point, Palo Alto, and Woodside quadrangles dated 2012, the elevation of the Site ranges from approximately 30 feet above mean sea level at the western boundary of the Site along El Camino Real to 20 feet above mean sea level at the eastern boundary of the Site. The topography of the Site is sloped to the southeast. The topography of the surrounding area is steeply sloped west of the Site with a general topographic gradient to the east-northeast.

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

11 El Camino Real Property: 11 El Camino Real, San Carlos, California

2.4.2 Geology

During a *Limited Phase II Environmental Site Investigation Memorandum* for the Site, prepared by Arcadis concurrently with this evaluation in May 2021 (2021 Limited Phase II Investigation), three soil borings were advanced at the Site in April 2021, as discussed further in Section 3.3. The on-site soils identified were variable at the three sampling locations. Soils at boring location SB-1 in the western portion of the Site included sand from approximately 0.4 to 4 feet below ground surface (bgs); silt from approximately 4 to 6 feet bgs, and clay from approximately 6 to 11 feet bgs. Soils at boring location SB-2 in the eastern portion of the Site included silt from approximately 0.4 to 9 feet bgs; concrete fill debris from approximately 9 to 10 feet bgs; and silt from approximately 10 to 30 feet bgs. Soils at boring location SB-3 in the northern portion of the Site adjoining the Site building included fill (sand and clay) from approximately 0.4 to 1.5 feet bgs; clay from approximately 1.5 to 9.5 feet bgs; and sand from approximately 9.5 to 10 feet bgs.

Geologic information in the EDR Report (**Appendix B**) specifies that the sediments beneath the Site have been identified as part of the Upper Mesozoic Series of the Cretaceous System of the Mesozoic Era. According to the United States Department of Agriculture (USDA) Soil Conservation Service, the Site is underlain by Urban Land, which is land mostly covered by streets, parking lots, buildings, and other structures of urban areas.

2.4.3 Hydrology

2.4.3.1 Surface Water

No surface water bodies are located on the Site. The closest surface water features are Belmont Creek, located approximately 1,300 feet northwest of the Site, and the San Francisco Bay, located approximately 1 mile southeast of the Site.

2.4.3.2 Wetlands

According to information obtained from the U.S. Fish and Wildlife Service (FWS) National Wetland Inventory (NWI) included in the EDR Report, no NWI-delineated wetland areas are located on the Site. The closest delineated wetlands were identified approximately a quarter mile southeast of the Site. During the Site visit, Arcadis did not observe apparent wetlands at the Site. According to Mr. Beaty, no wetlands have been delineated at the Site.

2.4.4 Hydrogeology

During the 2021 Limited Phase II investigation, soil borings were advanced to a maximum depth of 30 feet bgs and no groundwater was encountered. No monitoring wells were observed at the Site.

No wells are currently located at the Site. According to the well search information included in the EDR Report, the closest well listed is an Aquiflow well that was last sampled in December 1998. The well is mapped in the EDR Radius Map Report to the southern portion of the Site. The exact location or use of the well is unknown and Arcadis did not observe this well during the Site walk. At the time of the

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

11 El Camino Real Property: 11 El Camino Real, San Carlos, California

December 1998 sampling event, groundwater was encountered between 8.38 and 11.97 feet bgs and groundwater flow was to the north-northeast.

3 Site History

3.1 Historical Site Summary

The Site appeared as undeveloped and filled land from as early as 1896. No changes were evident until 1943, when the northern portion of the Site was developed with four rectangular structures and the southern portion of the Site was developed with a portion of a larger building that extended onto the south-adjacent parcel. By 1950, the northern portion of the Site was developed with one larger one-story building and two adjoining smaller one-story buildings, and the southern portion of the Site remained developed with a portion of a large, vacant commercial building. By 1970 and 1974, the buildings in the northern and southern portions of the Site had been demolished, respectively. The Site remained vacant until sometime prior to 1981, when the current Site building was constructed in the northern portion of the Site and the southern portion of the Site was developed with the current asphalt-paved parking lot. No significant changes were evident through the present.

The Site was first developed by 1950 for sign manufacturing and steel plating operations. By 1968, the buildings in the northern portion of the Site were used for carpet and boat storage, and the building along the southern portion of the Site was operated as a cabinet shop. It was unclear if the building was used for retail or manufacturing of cabinets. The current Site building was operated as Longs Drug Stores Inc. between 1986 and 2009 and by CVS from 2010 through the present.

3.2 Historical Information Sources

A list of the sources reviewed (**Appendix C**) is presented in the table below; information from these sources is summarized in Section 3.1.

Table 1. Historical Information Sources

Type of Record	Dates of Information	Source
Aerial photographs and satellite imagery	1943, 1946, 1956, 1958, 1963, 1968, 1970, 1974, 1982, 1993, 1998, 2005, 2009, 2012, 2016	The EDR Aerial Photo Decade Package

3.3 Prior Environmental Assessments, Investigations, and Events

Arcadis reviewed the following environmental report that was conducted by Arcadis concurrently with this Phase I ESA (**Appendix D**).

Limited Phase II Environmental Site Investigation Memorandum, prepared by Arcadis U.S. Inc. (Arcadis), dated May 21, 2021 (2021 Limited Phase II Investigation)

Arcadis conducted a Limited Phase II investigation to evaluate current conditions at the Site. Three soil borings were advanced at the Site to depths of approximately 10, 11, and 30 feet bgs. Soil samples were collected from the three borings at 6 and 10 feet bgs and analyzed for Total Petroleum Hydrocarbons (TPH), Volatile Organic Compounds (VOCs), Semivolatile Organic Compounds (SVOCs), and California Assessment Manual (CAM) 17 Metals. Shallow samples were collected at 2 feet bgs and also analyzed for Organochlorine Pesticides (OCPs), Polychlorinated Biphenyls (PCBs), and asbestos. A soil vapor probe was installed at soil boring SB-1. Boring location SB-2 was advanced to a depth of 30 feet bgs to collect a grab groundwater sample; however, no groundwater was encountered at this boring or the two other shallow borings at 10 and 11 feet bgs. One soil vapor sample and duplicate sample were analyzed for VOCs. Soil and soil vapor results were compared to the 2019 San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (SF RWQCB ESLs; SF RWQCB 2019). The 2021 Limited Phase II identified the following results and findings:

- Multiple constituents were detected above the ESLs in soil including: chlordane, aroclor-1260, cadmium, cobalt, lead, nickel, and vanadium. Most of the exceedances of the ESLs were found at approximately 2 and 6 feet bgs except for vanadium, which was detected above the ESLs in all of the soil samples.

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

11 El Camino Real Property: 11 El Camino Real, San Carlos, California

- Multiple constituents were detected above the ESLs in soil vapor including: methylene chloride, benzene, 1,2-dichloroethane, and tetrachloroethene.
- Based on the results of the sampling event, a vapor barrier was recommended beneath future ground level areas. The exceedances of constituents in soil and soil vapor are a REC for the Site.
- A grab groundwater sample was not collected at the Site as groundwater was not encountered at the deepest soil boring (30 feet bgs).

4 Site Regulatory Database Information

The EDR Report summarizes the federal, state, tribal, and local environmental record source regulatory database listings for the Site and for the adjoining and surrounding properties within specified search radii, as required by ASTM E1527-13. The Site address was listed on the databases indicated in the table below. Details of the database listings are discussed in the sections of this Report indicated below; database listings pertaining only to environmental compliance (i.e. Facility Index System [FINDS], Environmental Compliance History Online [ECHO], and the San Mateo County Business Index [BI]) are not further discussed.

Table 2. Environmental Database Listings

Database Name	Database Description	Entity Name Listed	Report Section
Resource Conservation and Recovery Act (RCRA) Large Quantity Generator (LQG)	The LQG database identifies facilities which are registered as LQGs.	CVS Pharmacy #9172	Section 5.3
California Environmental Reporting System Hazardous Waste (CERS HAZ Waste)	The CERS HAZ Waste database provides information for facilities in California that are registered for hazardous waste generation.	CVS Pharmacy #9172	Section 5.3.
Haznet	The Haznet database provides information for facilities that generate hazardous waste from hazardous waste manifests submitted to the Department of Toxic Substances Control (DTSC).	CVS Pharmacy #9172	Section 5.3.
Hazardous Waste Tracking System (HWTS)	The HWTS database provides information for operations and hazardous waste generation from hazardous waste manifests submitted to the DTSC.	CVS Pharmacy #9172	Section 5.3.

Search results for the adjoining and surrounding properties are discussed in Section 6.

5 Operational Environmental Matters

5.1 Material Handling and Storage

5.1.1 Aboveground Storage Tanks (ASTs)

No ASTs were observed at the Site, and no evidence of historical ASTs was identified through the review of the sources listed in Section 8 or through physical evidence observed during the Site visit.

5.1.2 Underground Storage Tanks (USTs)

No USTs were observed at the Site, and no evidence of current or historical USTs was identified through the review of the sources listed in Section 8 or through physical evidence observed during the Site visit.

5.1.3 Other Material Handling and Storage

Based on Arcadis' on-site observations, the following materials are currently handled and stored at the Site:

- **Hydraulic oil:** Hydraulic oil is used in a cardboard compactor located in the warehouse storage area. Mr. Beaty did not know the size of the hydraulic oil reservoir within the unit and no hydraulic oil containers were observed at the Site. The compactor was situated on concrete floors that had de minimis amounts of staining around the base; however, the concrete appeared to be in good condition with no pits or cracks. The staining is a de minimis condition.
- **Various Commercial Cleaning Materials:** Various commercial cleaning materials were observed in storage rooms and the janitor's closet at the Site. De minimis staining was observed in the janitor's closet that was attributed to poor housekeeping. The concrete in the janitor's closet was in fair condition with small cracks.
- **Paint:** A 5-gallon plastic bucket of paint was observed in the former photograph development room on the main floor of the Site building. No staining was observed near the bucket. Arcadis did observe de minimis staining in the room that was attributed to poor housekeeping. No floor drains were observed in the room.

Arcadis did not observe containers of hazardous substances or petroleum products, other than those described above and used in connection with identified uses at the Site.

Arcadis did not observe opened or damaged containers with unidentified contents suspected of being hazardous substances or petroleum products at the Site.

According to Sanborn Fire Insurance Maps, the Site was historically operated as a sign manufacturer with adjoining buildings used for metal plating around 1950. These buildings were used for warehouse storage by 1968. No further details regarding historical material use and storage practices were available.

5.2 Air Emissions

Arcadis did not observe air emissions that are likely to adversely affect other environmental media or to present a REC at the Site.

5.3 Waste

5.3.1 Hazardous Waste

Based on interviews with Mr. Beaty and Arcadis' on-site observations, spent pharmaceutical waste is the primary hazardous waste stream currently generated at the Site.

The hazardous waste central accumulation area is located in the eastern portion of the Site building near the loading dock. Hazardous waste generated at the Site is stored in plastic tubs. These containers were empty during the Site walk. A satellite hazardous waste accumulation area was observed in the pharmacy area. De minimis staining was observed in the loading dock near the hazardous waste storage area; however, this was attributed to poor housekeeping. No evidence of spills from the hazardous waste containers was observed.

The hazardous wastes are transported off-site for disposal and/or recycling.

Mr. Beaty was not aware of spills or releases of hazardous waste at the Site. No other hazardous wastes were observed at the Site, and no evidence of other hazardous wastes generated by CVS was identified through the review of the sources listed in Section 8 or through physical evidence observed during the Site visit.

According to the EDR Radius Map Report, CVS has been registered since 2013 as a LQG. According to the listing, CVS has been listed with the generation of 49 RCRA waste codes including ignitable waste, corrosive waste, metals, and solvents (benzene, formaldehyde, chloroform, tetrachloroethene).

According to the EDR Radius Map Report, CVS was subject to RCRA inspections in 2014, 2016, 2017, 2018, 2019, and 2020 and no violations were noted.

CVS is also listed in the CERS Haz Waste database as a hazardous waste generator (CERS ID 10341172). CVS received notices of violation in 2016, 2018, and 2019 for administrative issues (i.e. retaining hazardous waste manifests, displaying emergency contact information), which have since been resolved.

CVS is listed in the Haznet database for disposal of the following hazardous waste streams between 2015 and 2019: pharmaceutical waste (California Waste Code 311); unspecified solvent mixture (California Waste Code 214); liquids with pH less than or equal to 2 (California Waste Code 791); off-specification, aged, or surplus organics (California Waste Code 331); off-specification, aged, or surplus inorganics (California Waste Code 141); other organic solids (California Waste Code 352); alkaline solution without metals with a pH greater than or equal to 12.5 (California Waste Code 122); and aqueous solution (between a pH of 2 and 12.5) containing reactive anions and (California Waste Code 131). Longs Drug Store is also listed in the Haznet database for generation of the following hazardous waste streams between 1993 and 2011: off-specification, aged, or surplus inorganics (California Waste

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

11 El Camino Real Property: 11 El Camino Real, San Carlos, California

Code 141); unspecified organic liquid mixture (California Waste Code 343); photochemical/photo processing waste (California Waste Code 541); oxygenated solvents (California Waste Code 212); metal sludge (California Waste Code 171); and other inorganic solid waste (California Waste Code 181). No violations were noted.

CVS is listed in the HWTS database for hazardous waste generation between 2010 and 2020. Longs Drug Store is listed in the HWTS database for hazardous waste generation between 1992 and 2012.

Mr. Beaty stated that CVS has not been subject to enforcement pursuant to RCRA or the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA or Superfund), as it pertains to cleanups of on-site hazardous waste releases or disposal.

5.3.2 Other Regulated Waste

Based on interviews with Mr. Beaty and Arcadis' on-site observations, universal waste is the only other regulated waste stream currently generated at the Site.

The universal wastes are accumulated in plastic bins stored in the loading dock area, as needed. No universal waste was observed during the Site walk. In general, housekeeping in the waste accumulation area was observed to be good. De minimis staining was observed near this area that was attributed to poor housekeeping at the loading dock.

Mr. Beaty was not aware of spills or releases of other regulated waste at the Site. No other regulated wastes were observed at the Site, and no evidence of other historical regulated wastes was identified through the review of the sources listed in Section 8.

5.3.3 Non-Hazardous Waste

Based on Arcadis' on-site observations, the following non-hazardous solid waste and recycling streams are currently generated or were formerly generated at the Site: paper, cardboard, and general refuse.

Paper, cardboard, and general refuse are stored in covered dumpsters located in the loading dock in the eastern portion of the Site and are transported off Site for recycling or landfilling.

In general, housekeeping in the non-hazardous waste accumulation areas was observed to be good. No staining or evidence of spills or releases was noted. However, Arcadis noted poor housekeeping near a dumpster in the southern portion of the Site. According to Mr. Beaty, the dumpster is used by off-Site tenants. Several wooden pallets were observed near a cardboard dumpster that was overfilled.

Mr. Beaty was not aware of spills or releases of non-hazardous waste at the Site. No other non-hazardous wastes were observed at the Site, and no evidence of other historical non-hazardous wastes was identified through the review of the sources listed in Section 8 or through physical evidence observed during the Site visit.

5.3.4 On-site Solid Waste Disposal

During the Site visit, Arcadis looked for areas that were apparently filled or graded by non-natural causes (or filled with material of unknown origin) that suggest the presence of trash construction debris,

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

11 El Camino Real Property: 11 El Camino Real, San Carlos, California

demolition debris, or other solid waste disposal, or mounds or depressions suggesting trash or other solid waste disposal. Sampling conducted as part of the 2021 Limited Phase II found areas of concrete debris at approximately 10 feet bgs. The source of these debris is unknown.

5.4 Water, Wastewater, and Storm Water

5.4.1 Water Use and Supply

The Site is connected to the California Water Service's Mid-Peninsula District water supply. No other sources of water are used at the Site.

5.4.2 Wastewater

5.4.2.1 Drains and Sumps

Floor drains were observed in employee restrooms. Additionally, a mop sink is situated in the janitorial closet. No sumps were observed at the Site.

5.4.2.2 Septic Systems

No evidence of current or former septic systems at the Site was identified through the review of the sources listed in Section 8 or through physical evidence observed during the Site visit.

5.4.2.3 Discharges to Publicly Owned Treatment Works

No process wastewater is generated at the Site. Mop water from floor washing is discharged through a mop sink in the janitorial closet. The floor drains in the employee restrooms and the janitor's closet are also routed to the Silicon Valley Clean Water (SVCW) treatment system. All floor drains, as well as sanitary wastewater from the Site, are routed to the SVCW system.

5.4.2.4 Pits, Ponds, and Lagoons

No pits, ponds, or lagoons are located at the Site.

5.4.3 Storm Water

Stormwater runoff sheet flows to grated inlets located in the paved parking areas outside the building. No visual indications of oil or other pollutants were noted near the drains. The drains are routed to the municipal storm sewer system.

5.5 Hazardous Building Materials and Conditions

5.5.1 Asbestos-Containing Materials (ACMs)

ACMs have historically been used in a variety of building materials and other products. Between 1973 and 1978, under the asbestos National Emission Standard for Hazardous Air Pollutants (NESHAP), the USEPA banned spray-applied surfacing ACM. In 1989, the USEPA issued a final rule under Section 6 of the Toxic Substances Control Act (TSCA) banning most asbestos-containing products; however, in 1991, the rule was vacated and remanded by the Fifth Circuit Court of Appeals. Only the bans on corrugated paper, rollboard, commercial paper, specialty paper, and flooring felt and any new uses of asbestos remain banned under the 1989 rule. In addition, the Occupational Safety and Health Act defines presumed ACM (PACM) as thermal system insulation (TSI) and surfacing material found in buildings constructed no later than 1980.

The Site building was constructed in 1981. Based on the construction date, it is unlikely that ACMs were used in the construction. Asbestos were not detected in soil samples collected at approximately 2 feet bgs during the 2021 Limited Phase II Investigation (see Section 3.3).

5.5.2 Lead-based Paint

Lead-based paint was commonly used for a variety of purposes, until 1978 when federal regulations banned consumer uses of lead-containing paint, though exceptions applied for certain commercial and other paints. Federal regulations require certain disclosures regarding lead-based paint for housing constructed prior to 1978.

The Site building was constructed in 1981, which is after the 1978 ban on consumer uses of lead-based paint.

5.6 Other Hazardous Substances

5.6.1 Polychlorinated Biphenyls (PCBs)

PCBs are a group of organic chemicals that were used historically in a variety of industrial and chemical applications, including transformers, ballasts, other electrical equipment, and hydraulic oils, among many other products. PCBs were manufactured in the United States from 1929 until 1979, when PCB manufacturing was banned due to the toxicity of PCBs.

Electrical equipment manufactured after July 2, 1979 can be assumed to be non-PCB (i.e., <50 ppm PCBs). The Site building was constructed in 1981. Based on the construction date, it is unlikely that PCBs are present in on-site equipment and materials. One pad-mounted electrical transformer was located southeast of the Site building. The transformer was in good condition with no indications of staining or releases. No labels were observed to indicate the PCB-content of the transformer.

5.6.2 Per- and Polyfluoroalkyl Substances (PFAS)

Per- and polyfluoroalkyl substances (PFAS) are a group of man-made, emerging contaminants that includes Perfluorooctanoic acid (PFOA), Perfluorooctanesulfonic acid (PFOS), and several other chemicals. PFAS have been manufactured and used in various industries around the world and in the United States since the 1940s. Uses and potential sources of PFAS include firefighting foam, landfills, military installations, airports, electronics, metal plating, inks and paints, hydraulic fluids, and several consumer products including fast food packaging, carpet, and non-stick cookware. PFOA and PFOS are no longer manufactured in the United States but are still produced internationally and can be imported via consumer goods into the United States.

PFAS are characterized as persisting and accumulating in the environment and living organisms and are considered highly mobile up to several miles from their source. Exposure to PFAS can lead to adverse human health effects at very low concentrations. PFAS are also frequently found in drinking water supplies around the world and have been determined to be present in the majority of people at various concentrations. Regulatory scrutiny associated with PFAS is increasing significantly, and several states have begun evaluating and promulgating regulatory cleanup standards for PFAS in advance of USEPA.

Based on Arcadis' review of the sources identified in Section 8.0, neither current nor historical Site operations appear to include the use of PFAS. Known or potential sources of PFAS associated with adjacent or surrounding properties, if identified, are discussed in Section 6.0.

5.7 Indicators of Environmental Impact

5.7.1 Odors

No odors that would indicate a REC were noted during the Site visit.

5.7.2 Stains and Corrosion

De minimis oil staining was observed on the concrete floors in storage rooms, concrete floors and the janitor's sink in the janitor's closet, and in the loading dock. However, the concrete in these areas was observed to be in fair to good condition with limited areas of cracks, breaks, or other direct conduits to the subsurface. De minimis staining was also observed in the asphalt-paved parking lot.

5.7.3 Stressed Vegetation

During the Site visit, Arcadis' representative looked for areas of stressed vegetation (from other than insufficient water). No areas of stressed vegetation were observed during this assessment.

5.7.4 Environmental Liens and Activity and Use Limitations

According to Mr. Beaty, there are no environmental liens or activity and use limitations (AULs) associated with the Site.

6 Adjoining and Surrounding Properties

6.1 Current Uses of Adjoining and Surrounding Properties

The following properties adjoin the Site (**Figure 3**):

- **North:** Vacant and paved parcel, followed by F Street. Beyond F Street are the Belmont Apartments and the Neptune Society of Northern California.
- **East:** Caltrain railroad tracks, beyond which is Old Country Road.
- **South:** Jersey Joe's Cheesesteak, beyond which is Nice Nails.
- **West:** El Camino Real, beyond which are a hotel building currently under construction and a multi-tenant medical office building.

Land use in the surrounding area consists of commercial, light industrial, and residential properties.

Several of the facilities adjoining and surrounding the Site were identified in the databases listed in the EDR Report, as discussed in Section 6.3.

6.2 Historical Uses of Adjoining and Surrounding Properties

The Site area was developed with railroad tracks, roads, and small structures to the west and wetland areas to the east from as early as 1896. No changes were evident until sometime prior to 1939, when the area east of the Site appeared to be filled and several small structures and roads had been developed north, south, and west of the Site. By 1943, the areas south and southwest of the Site had been developed with small structures and the areas far north and south of the Site had been developed with residential properties. By 1946, a large rectangular building had been constructed south of the Site that extended into the southern portion of the Site. By 1956, the areas immediately surrounding and far east of the Site had been further developed with commercial or industrial properties, and the areas far northwest, west, and southwest of the Site had been developed with residential properties. The areas east, south, and west of the Site continued to be developed with commercial and/or industrial properties until 1974, when the buildings adjoining the Site to the north and south were demolished. By 1982, the multi-tenant buildings within San Carlos Plaza south-adjacent to the Site had been constructed and the areas west and east of the Site had been further developed with commercial/industrial properties. By 2005, the adjoining and surrounding properties appeared to be in a configuration generally consistent with the current property uses described above.

6.3 Environmental Record Sources and Regulatory Agency File and Records Reviews

The EDR Report summarizes the federal, state, tribal, and local environmental regulatory database listings for the Site and for the adjoining and surrounding properties within specified search radii, as required by ASTM E1527-13. Adjoining and surrounding properties identified within the search radii

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

11 El Camino Real Property: 11 El Camino Real, San Carlos, California

were evaluated to determine if they are likely to have adversely impacted the Site. The criteria used to evaluate the potential for adverse impact to the Site include:

- Distance from the Site
- Expected depth and direction of groundwater flow
- Expected direction of surface water and stormwater runoff flow
- Presence or absence of documented releases of hazardous substances and/or petroleum products at the identified facilities, the nature of such releases, and where applicable, status of associated investigations, remediation, and regulatory closure

6.3.1 Adjoining Properties

Adjoining properties identified in the databases and a determination of the necessity of further regulatory agency research are listed in the following table. Several adjoining properties are listed in the San Mateo County BI database. This database pertains to compliance matters such as enrollment in San Mateo County programs for stormwater and hazardous waste. These listings are not independently indicative of environmental concern and are not evaluated further.

Table 3. Adjoining Property Regulatory Database Listings

Property Name and Address Direction (and gradient) from Site	Database Listing(s) Determination of Necessity of Further Regulatory Agency Research
Sitaram Enterprises, Hotel San Carlos 26 El Camino Real West (upgradient)	<p>RCRA NonGen/NLR</p> Sitaram Enterprises Inc. (Sitaram) is located west-adjacent to the Site across El Camino Real. Sitaram is listed in the RCRA Non Generator/No Longer Operating (NonGen/NLR) database in May 2019. Sitaram was listed as a universal waste handler and no further information was available regarding historical generator status or hazardous waste streams. No violations were noted. Given that this listing pertains to compliance matters and no violations were noted, no further research is warranted.
Dr. Urmi Amin 10 El Camino Real West (upgradient)	<p>RCRA NonGen/NLR</p> Dr. Urmi Amin is listed in the RCRA NonGen/NLR database in January 2009 as a universal waste generator. No further information was provided regarding historical hazardous waste generation or generator status and no violations were noted. Given that this listing pertains to compliance matters and no violations were noted, no further research is warranted.

6.3.2 Surrounding Properties

Numerous surrounding properties were identified on the databases in the EDR Report. Based on the criteria listed in Section 6.3 and the detections of VOCs in soil vapor detected during the 2021 Limited Phase II Investigation, the following surrounding properties listed in the EDR database report were evaluated to determine if they represent a concern of environmental impairment to the Site:

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

11 El Camino Real Property: 11 El Camino Real, San Carlos, California

Camino Cleaners at 58 El Camino Real

Camino Cleaners is located 185 feet southwest and upgradient to the Site. Camino Cleaners is listed in the EDR Historical Cleaner, San Mateo County Business Inventory BI, and Emissions Inventory Data (EMI) databases.

According to the EDR Historical Cleaner database and the EDR City Directory Report, the property address was operated as Delia's Cleaners and Drapery and MBG Capital Corporation (MBG) between 1987 and 1995 and Camino Cleaners between 2000 and 2005.

Camino Cleaners is listed in the San Mateo County BI database for generating and recycling waste oil and solvent, and storing hazardous materials (less than 1,199 gallons; 9,999 pounds; 799 cubic feet). The property address is listed as MBG in the EMI database for an air permit with the Bay Area Air Quality Management District (AQMD). MBG was listed with emissions of Total Organic Hydrocarbon Gases in 1987, 1990, 1995, 1996, and 1997. According to the BAAQMD records, Camino Cleaners was listed as generating PCE emissions (2 pounds/day) during operations at the facility. No violations were noted.

Although no violations have been noted and no investigations have been conducted, given the duration of dry cleaning operations at the property and the proximity to the Site, the historical dry cleaning operations at the property are a REC.

San Carlos Plaza Dry Cleaner at 81 El Camino Real

San Carlos Plaza Dry Cleaners is located 260 feet southeast and crossgradient of the Site and is listed in the EDR Historical Cleaner, San Mateo County BI, RCRA-SQG, RCRA NonGen/NLR, FINDS, Drycleaners, CERS, Haznet, and HWTS databases.

According to the EDR Historical Cleaners database, Drycleaners database, and the EDR City Directory Report, the property address was operated as Holiday Cleaners AM from 1991 through 1995 and as San Carlos Plaza Dry Cleaners from 1997 through the present. San Carlos Dry Cleaners is also listed in the EMI database with an air permit with the Bay Area AQMD from 1998 to 2010; however, emissions of Total Organic Hydrocarbon Gases and/or Reactive Organic Gases were only reported between 2006 and 2010. San Carlos Dry Cleaners is listed in the CERS database with an air permit.

San Carlos Plaza Dry Cleaners is listed in the RCRA-SQG database in September 1991. No further information was available regarding historical hazardous waste generator status or waste streams and no violations were noted. San Carlos Plaza Dry Cleaner is also listed in the RCRA NonGen/NLR database in December 2014 and December 2016. No further information was available regarding historical hazardous waste generation or status and no violations were noted. San Carlos Plaza Dry Cleaners is also listed in the Haznet database for generation of liquids with halogenated organic compounds greater than 1,000 milligrams per liter (mg/L; California Waste Code 741) from 1993 to 1996. San Carlos Plaza Dry Cleaner is also listed in the HWTS database for hazardous waste generation between 1991 and 1996 and 2008 and 2015. No violations were noted.

Arcadis requested records from the San Mateo County Environmental Health Services Division. Although no violations have been noted and no investigations have been conducted, given the duration of dry cleaning operations at the property and the proximity to the Site, the historical dry cleaning operations at the property are a REC.

7 Conclusions

7.1 Findings and Opinion

Arcadis has performed a Phase I ESA of the Site in conformance with the scope and limitations of ASTM Practice E1527-13 for Phase I ESAs. This assessment has revealed the following RECs, CRECs, HRECs, and other environmental conditions as defined in Section 1.2 of this Phase I ESA Report.

7.1.1 Recognized Environmental Conditions

The following REC was identified in connection with the Site:

Soil and Soil Vapor Environmental Screening Level Exceedances: Multiple constituents in soil and soil vapor were detected at the Site at concentrations that exceeded the SF RWQCB ESLs during a Limited Phase II Site Investigation (Arcadis 2021). Several metals, chlordane, and aroclor-1260 were detected above the ESLs in soil and benzene, 1,2-dichloroethane, tetrachloroethene, and methylene chloride were detected above the SF RWQCB ESLs in soil vapor. The source of these impacts is unknown and the exceedances of the SF RWQCB ESLs is a REC. The Site was historically used for electroplating and sign manufacturing from at least 1950 until sometime prior to 1968 and several dry cleaners and gas stations have been in operation at surrounding properties since the 1980s. Specifically, Camino Cleaners (58 El Camino Real) was in operation 185 feet west of the Site from 1986 through 2005 and the current San Carlos Plaza Dry Cleaners facility (81 El Camino Real) has been in operation 260 feet south of the Site for dry cleaning services from 1991 through the present.

7.1.2 Controlled Recognized Environmental Conditions

No CRECs were identified in connection with the Site.

7.1.3 Historical Recognized Environmental Conditions

No HRECs were identified in connection with the Site.

7.1.4 De Minimis Conditions

The following de minimis conditions were identified in connection with the Site:

Staining: De minimis oil staining was observed on the concrete floors in storage rooms, concrete floors and the janitor's sink in the janitor's closet, and in the loading dock. However, the concrete in these areas was observed to be in fair to good condition with limited areas of cracks, breaks, or other direct conduits to the subsurface. De minimis staining was also observed in the asphalt-paved parking lot.

Adjacent Rail Line: A rail line is located adjacent to the east side of the Site and has been in use since at least 1939. The rail line is currently used for Caltrain commuter trains and no rail sidings or spurs are located on the Site itself. Arcadis did not observe visual indications of spills or releases associated with

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

11 El Camino Real Property: 11 El Camino Real, San Carlos, California

the rail siding. In addition, no information was available regarding spills or releases from the rail line. Therefore, the adjacent rail line is considered to be a de minimis condition.

7.1.5 Other Environmental Conditions

No other environmental conditions were identified in connection with the Site.

7.2 Environmental Professional Statement

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in Title 40 of the Code of Federal Regulations (CFR) § 312.10, and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR § 312.*

The designated Environmental Professionals for this project are Ms. Divya Mehta and Ms. Liz Rodriguez.

Resumes for Ms. Mehta and Ms. Rodriguez are attached in **Appendix E**.

*A professional geologist's or registered environmental assessor's certification of conditions comprises a declaration of his or her professional judgment. It does not constitute a warranty or guarantee, expressed or implied, nor does it relieve any other party of its responsibility to abide by contract documents, applicable codes, standards, regulations, and ordinances.

8 Sources, References, Assumptions, and Limitations

8.1 User-provided Information

Mr. Richard Norris of SummerHill provided information regarding the Site via a User Questionnaire (Appendix F), to satisfy the User’s responsibilities described in ASTM E1527-13 Sections 6.2 to 6.7. Information provided by Mr. Norris is summarized in relevant sections throughout this Phase I ESA Report.

8.2 Records Review

8.2.1 Regulatory Agency File and Records Reviews

Regulatory agency files and records requested and/or reviewed for the Site are summarized in the following table:

Table 4. Regulatory Agency File and Records Requests

Agency	Method of Request	Date of Request	Response
USEPA	Online database review (Envirofacts, ECHO)	May 5, 2021	Records reviewed (see Section 5.3)
RWQCB	Online database review (Geotracker)	May 5, 2021	No records available
DTSC	Online database review (Envirostor)	May 5, 2021	No records available
San Mateo Environmental Health Services Division	Online request	May 5, 2021	Records reviewed (see Section 6.3)
San Mateo County Assessor’s Office	Online request	May 8, 2021	Records available (see Section 2).
Bay Area Air Quality Management District	Online request	May 18, 2021	Records available (see Section 6.3)
City of San Carlos	Online request	May 8, 2021	No records available

8.2.2 Physical Setting Sources

The physical setting sources are described in Section 2.4 of this Report.

8.2.3 Standard and Other Historical Sources

The standard and other historical sources are listed in Section 3.2 of this Report.

8.3 Interviews with Past and Present Owners and Occupants

Arcadis interviewed the following owner(s) and occupant(s) of the Site:

- Mr. Beaty, Store Manager (present owner/occupant representative)

Contact information for past owners and occupants of the Site was not provided to Arcadis. The Site is not abandoned; therefore, owners and occupants of neighboring or nearby properties were not interviewed.

8.4 Interviews with State and/or Local Government Officials

State and/or local government officials contacted during this Phase I ESA are summarized in Section 8.2.1.

Other documents reviewed are referenced throughout this Phase I ESA.

8.6 Significant Assumptions

Arcadis has assumed that the information sources used for this Phase I ESA provided accurate information.

Evaluations presented in this Phase I ESA Report are based exclusively on the sources listed herein; no invasive field activities were conducted, and no laboratory analyses were performed.

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

11 El Camino Real Property: 11 El Camino Real, San Carlos, California

The boundaries of the Site were described in documents provided by SummerHill and by interviews with Site personnel. Arcadis has assumed that this information was accurate.

8.7 Limitations and Exceptions

The services performed and any opinions expressed by Arcadis in this Phase I ESA Report are based upon the limits of the Phase I ESA described herein. Arcadis has relied upon the accuracy of documents, information, data, and other materials provided or made available by the User and others. Arcadis has not independently verified such information and assumes no liability for the accuracy or completeness of such information. Conclusions provided with regard to subsurface soil and groundwater impacts are limited to those that can be formed based on a non-intrusive investigation. The absence of environmental hazards in the subsurface cannot be guaranteed based on conditions observed on the surface. The scope of this project did not include sampling of environmental media. Arcadis makes no guarantee that Site conditions do not exist, or will not exist in the future, that were undetected or that could lead to liability in connection with the Site. Similarly, past and present activities on the Site indicating the potential for the existence of environmental concerns may not have been discovered by Arcadis. Such activities may include those that would indicate the potential for regulated hazardous substances at the Site. Likewise, Site conditions or Site activities that were outside the scope of the services described above, or changes to Site conditions or regulatory requirements may lead to liabilities in connection with the Site that are not identified in this Phase I ESA Report. Arcadis has reviewed the information obtained in connection with the performance of the services described above, in keeping with existing applicable environmental consulting standards and enforcement practices, but cannot predict what actions any given agency may take or what standards and practices may apply in the future.

Unless otherwise described in the body of this Phase I ESA Report, if any one or more of the standard sources under ASTM was not reviewed, this was due to information from the source not being readily available or a determination by the Environmental Professional that the standard source was not likely to be useful. Similarly, unless otherwise noted in this Phase I ESA Report, an incompleteness in connection with the review was determined not to affect the Environmental Professional's ability to form conclusions regarding the Site.

Arcadis evaluates the potential for the presence or likely presence of vapor in the subsurface of the Site using the Environmental Professional's professional judgment and evaluation of the available information and may use portions of ASTM E2600-15 as a guide. This evaluation is not a full Vapor Encroachment Screen (VES) pursuant to ASTM E2600-15. The vapor evaluation is not exhaustive and cannot wholly eliminate uncertainty regarding the presence or potential presence of vapors in the subsurface of the Site.

Where access to portions of the Site or to structures on the Site was unavailable or limited, Arcadis renders no opinion and accepts no responsibility for assessment of the condition of these portions of the Site, including specifically, but not limited to, the presence of hazardous substances or petroleum products at these locations. In addition, Arcadis renders no opinion concerning the presence or absence of hazardous substances or petroleum products where direct observation of any part of the Site, or structure on the Site, is limited by physical obstructions. Unless otherwise noted herein, Arcadis did not access the roof(s) of on-site building(s).

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

11 El Camino Real Property: 11 El Camino Real, San Carlos, California

The conclusions and observations are based upon limited data and professional opinions, and the Site visit was performed on a particular date. Site conditions and activities may change after that date. Therefore, the risk of undiscovered environmental impairment of the Site cannot be ruled out. Arcadis does not make any representations or warranties regarding the condition or value of the Site, regardless of the results of the assessment presented in this Phase I ESA Report.

Arcadis' scope of work includes a cursory visual observation for apparent wetland areas and a cursory visual observation to identify typical suspect ACMs and lead-based paint. The Arcadis representative who performed the Site visit and made such observations is not necessarily a US Army Corps of Engineers (USACOE)-certified wetland professional or a state-accredited asbestos.

Arcadis makes no guarantees, certifications, warranties, or representations of any kind whatsoever, whether expressed or implied, regarding this Phase I ESA, the condition of the Site, or the liabilities associated with the Site.

8.8 Data Gaps

ASTM E1527-13 defines a data gap as "a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information." No data gaps were identified during this Phase I ESA.

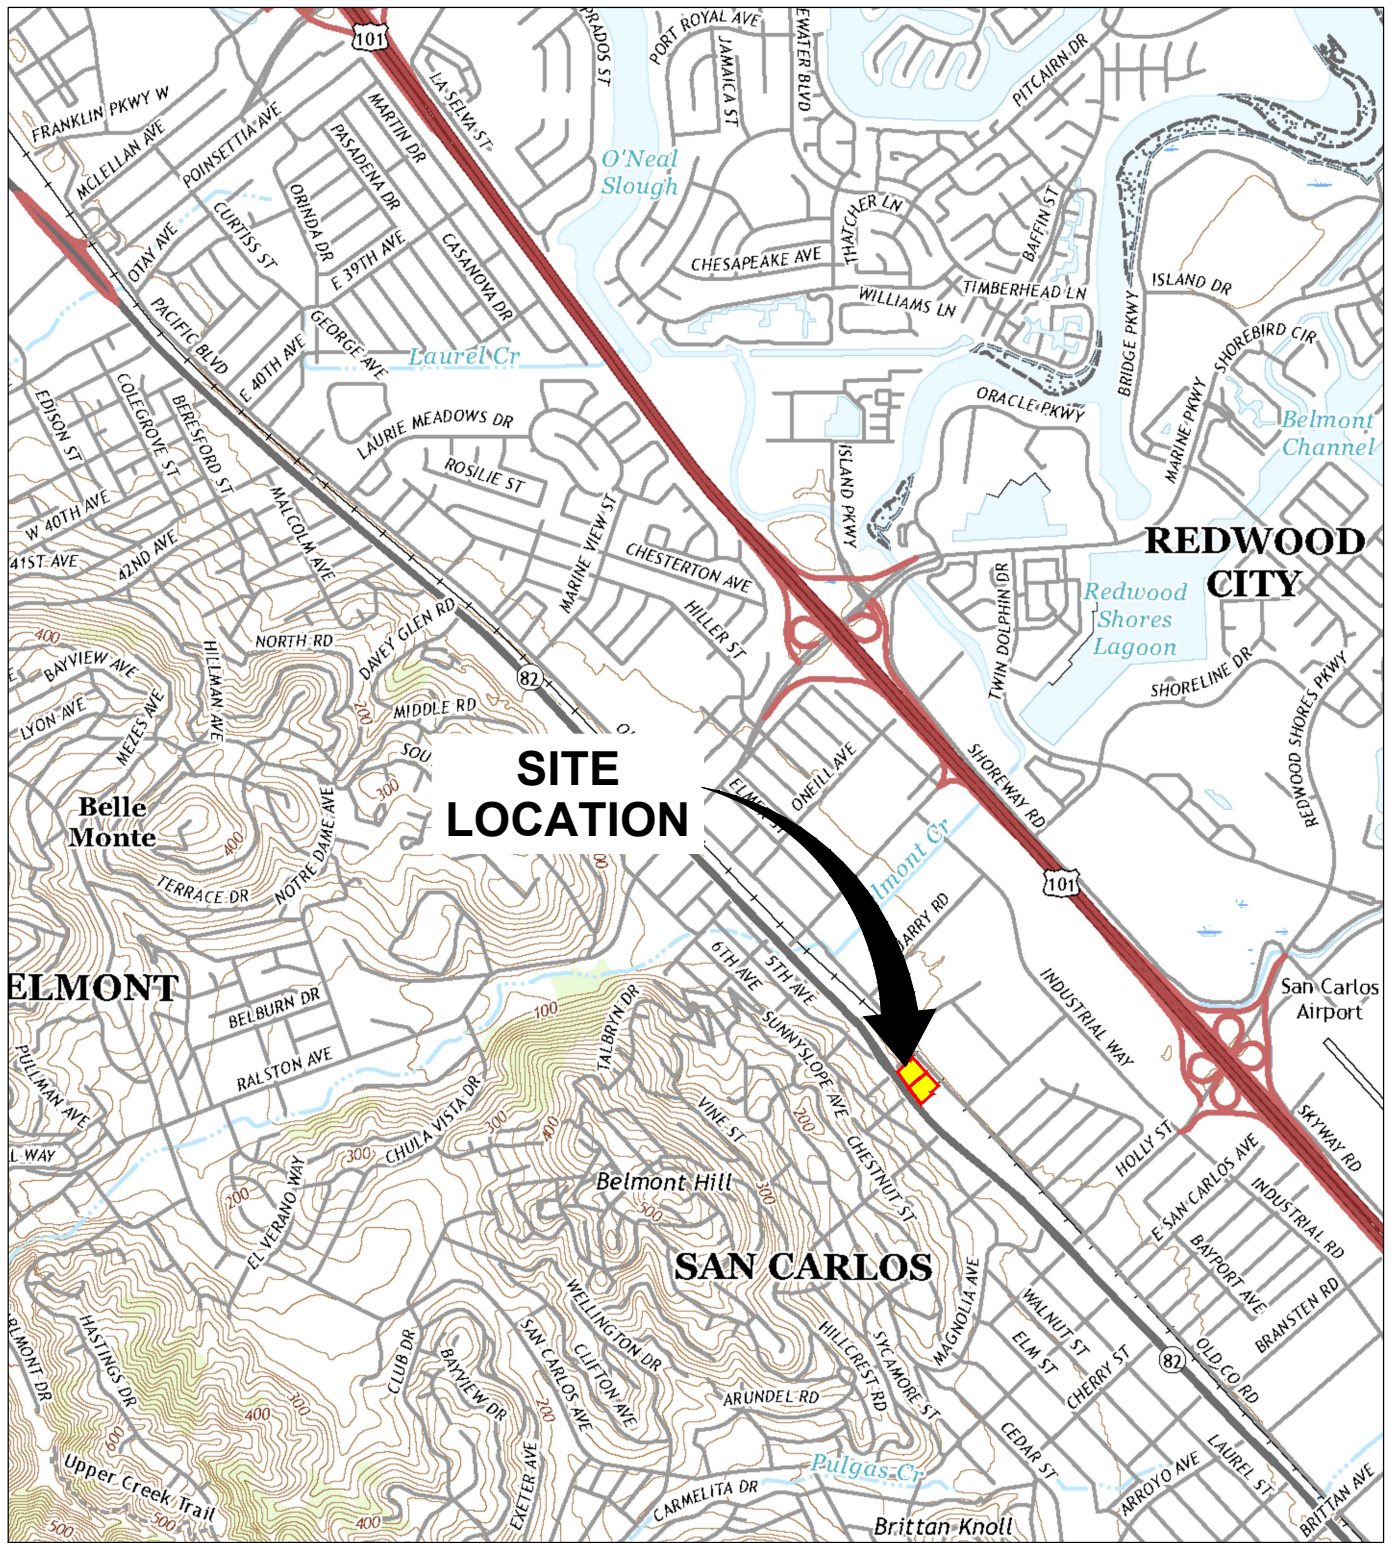

8.9 Deviations

No deviations from ASTM E1527-13 occurred in this Phase I ESA.

8.10 Reliance

This Phase I ESA Report has been prepared for the sole use of SummerHill and the contents thereof may not be used or relied upon by any other person without the express written consent and authorization of Arcadis. Use of this Phase I ESA Report by any other party shall be at such party's sole risk and liability.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
PROTO METALS Site ID: 0905347 EPA Id: CA0001898576	1565 OLD COUNTY ROAD	NW 1/4 - 1/2 (0.328 mi.)	AE244	828

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/30/2020 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 13 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/25/2021 has revealed that there are 18 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 14 CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 HIST Cal-Sites site within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 11 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 63 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

CERS HAZ WASTE:

Name: CVS/PHARMACY #9172
Address: 11 EL CAMINO REAL
City,State,Zip: SAN CARLOS, CA 94070
Site ID: 109747
CERS ID: 10341172
CERS Description: Hazardous Waste Generator

Violations:

Site ID: 109747
Site Name: CVS/PHARMACY #9172
Violation Date: 12-27-2016
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 01/06/2017. Designated Facility to Generator return manifest copies missing for manifests 008663457 FLE and 008663457 FLE both dated 3/28/16, and 008517735 FLE and 008517735 FLE both dated 7/31/15. Obtain copies as needed for on site record keeping and to show corrective action to CUPA.
Violation Division: San Mateo County Environmental Health

Site ID: 109747
Site Name: CVS/PHARMACY #9172
Violation Date: 03-07-2019
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 03/18/2019. Based on my review of the DTSC HWTS I observed that manifest # 010855792 FLE dated 1/18/18 is not available in the CVS EH&S Binder. Furthermore, I could not locate the following Designated Facility to Generator return manifest copies: 010733269 FLE dated 11/1/17; 010824844 FLE, 010824845 FLE, and 010824846 FLE all dated 4/6/18; and 012414124 FLE, 012414125 FLE, and 012414126 FLE all dated 9/25/18. Provide copies of the above referenced missing manifests to the CUPA within 30 days and ensure that these and future manifests are maintained on site and available for inspection.

Eval Notes: I conducted a follow up inspection for the hazardous waste generator program inspection conducted last Thursday. I observed that some missing manifests are now available, but there are still several Designated Facility to Generator return manifest copies that are currently not available. The missing manifests are as follows: 010733269 FLE dated 11/1/17; 010824844 FLE, 010824845 FLE, and 010824846 FLE all dated 4/6/18; and 012414124 FLE dated 9/25/18. Once the missing manifests are located, make sure a copy is available on site and email a copy of each manifest to me so that I can close out the minor violations associated with this item. In addition, I attached an emergency procedures information form that can be completed and used to comply with the small quantity generator requirements that may be applicable at the time of inspection based on hazardous waste generation activities at the time of the inspection. I recommend that CVS complete the emergency procedures form [Truncated]

Violation Source: CERS

Site ID: 109747
Site Name: CVS/PHARMACY #9172
Violation Date: 03-07-2019
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 03/18/2019. Based on my review of the DTSC HWTS I observed that manifest # 010855792 FLE dated 1/18/18 is not available in the CVS EH&S Binder. Furthermore, I could not locate the following Designated Facility to Generator return manifest copies: 010733269 FLE dated 11/1/17; 010824844 FLE, 010824845 FLE, and 010824846 FLE all dated 4/6/18; and 012414124 FLE, 012414125 FLE, and 012414126 FLE all dated 9/25/18. Provide copies of the above referenced missing manifests to the CUPA within 30 days and ensure that these and future manifests are maintained on site and available for inspection.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:

Site ID: 40786
Site Name: JUSTINS CHEVRON
Violation Date: 07-24-2019
Citation: 23 CCR 16 2716(e) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2716(e)

Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.

Violation Notes: Returned to compliance on 08/05/2019. There was no DO reports on site for the month of April 2019. If DO inspection was completed in this month, obtain copies of the report and keep on site and provide copies to SMCUPA within 30 days. If no inspections were performed on these months, notify SMCUPA.

Environmental Portal and make the following changes to the tank pages and resubmit the UST tank pages within 30 days. Vent piping transition sump needs to be checked as "none" instead of single wall for both tanks. Uncheck the "pipe integrity testing" box on both tanks. Add leak sensor and model for the UDC sensors (Bravo boxes). Manufacturer should be Bravo and the model is B2000. Panel manufacturer and model can be removed from the UDC section since the Bravo Boxes are not hooked up to the monitoring panel. This should be changed for both tanks also. <https://ehesubmit.smchealth.org>

Violation Source: CERS

Site ID: 40786
Site Name: JUSTINS CHEVRON
Violation Date: 06-22-2020
Citation: 23 CCR 16 2636(f)(4) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(4)
Violation Description: Failure to meet one or more of the following monitoring requirements in lieu of the requirement to be tightness tested every 12 months: The monitoring system maintains all product piping outside the dispenser to be fail-safe and shut down the pump when a leak is detected. The monitoring system shuts down the pump or stops flow when a leak is detected in the under dispenser containment (UDC).
Violation Notes: Returned to compliance on 06/22/2020. All Bravo UDC sumps have excessive solid debris including pieces of wire and peeling paint chips. Contractor cleaned the obvious debris out by hand and tested the float/chain mechanical shut-offs with test water. UDC for dispenser 7/8 failed test and passed the retest after the pan was cleaned and chain adjusted.

Violation Date: 06-22-2020
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2

Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container.

Violation Notes: Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "

Regular fill riser lost 1/2 in. of test water and failed hydrostatic test. Test failure appears to be related to a damaged rubber gasket at the swivel adapter. Contractor plans to repair and retest on 6/23 when working in the area.

Eval Notes:	I stopped by JustinG s Chevron to review the records for the designated operator inspections and I observed that these records are signed and in order. There is one item that needs to be completed to close out the open UST violation. Complete the Designated UST Operator Identification Form to indicate the current designated operators, log in to the EH Portal and select the UST Facility Form, replace the old form with the current form, and complete the submittal. Once I see that this has been completed I will close out the violation and send you and email to confirm the corrective action.

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History: Extracted from RRM's January 17, 2002 Risk-Based Closure Assessment Report, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The Auto Pride Car Wash is located at 195 El Camino real in San Carlos California. The property is an approximately 32,000 square foot rectangular lot located along the northeast side of El Camino Real, immediately south and across from

MAP FINDINGS

CHEVRON CAR WASH (Continued)

U001594676

the intersection with Hull Road. The property is located in a commercial area of San Carlos and is bordered by retail stores to the northwest, a hotel to the southeast, and the Southern Pacific Railroad right of way to the northeast. Site improvements include a 30 foot by 60 foot carwash, a lube-bay facility, and retail gasoline dispensing facilities. In January 1990, C&B Construction Company excavated, removed, and off-hauled the three original USTs. During the excavation process, approximately 700 cubic yards of petroleum hydrocarbon impacted soils were stockpiled. On-Site collected a total of forty-three soil samples including six samples from the bottom of the pit, two sidewall samples, and thirty-five samples of the stockpiled soils. All eight soil samples collected from the excavation pit contained detectable levels of TPHg ranging from less than 30 milligrams per kilogram (mg/kg) to 150 mg/kg. Thirty of the thirty-five excavation spoils samples contained detectable levels of TPHg ranging from 6.0 mg/kg to 11,000 mg/kg. Upon completion of the tank-removal program, C&B installed three new double-walled 8,000-gallon tanks in the same excavation and backfilled the pit with pea gravel. After a period of aeration and an additional round of testing by On-Site, the contaminated soils were ultimately off hauled for proper disposal. In March 1990, On-Site drilled three borings to approximately 25 feet bgs, collected soil samples at 5-foot intervals, prepared geologic logs, and completed the borings as 2-inch diameter wells, designated GX-170A, GX-170B, and GX-170C. On-Site then developed, sounded, purged and sampled the three wells and provided certified analyses for three groundwater samples. The sample from Well GX-170A located directly down gradient of the former tanks contained 990 micrograms per liter (ug/L) TPHg and 330 ug/L benzene. TPHg were not detected in the other two wells, which were located up gradient and cross gradient from the former USTs. In October-November 1990, Wahler Associates (Wahler), Palo Alto, CA performed the following additional site investigations: (1) conducted a soil-gas survey by advancing five metal probes to 5 to 10 feet from grade down gradient of Well GX- 170A; (2) drilled two additional borings to 25 feet bgs and prepared geologic logs; (3) converted the borings to 1-diameter piezometers, designated PZ-1 and PZ-2; (4) sounded, purged, and sampled all five existing wells; and (5) provided certified analyses for five groundwater samples. The highest concentrations of TPHg (9,800 ug/L) and benzene (970 ug/L) were detected in groundwater samples collected from Well PZ-1, located directly down gradient of Well GX-170A and the former tanks. The soil-gas survey provided further indications that soil and groundwater contamination extended downgradient from the former USTs. In December-January 1991, Wahler drilled one additional boring to a depth of 28-feet bgs along the northern property line. Wahler collected soil samples at 5-foot intervals, prepared a geologic log, and converted the boring to a 6-inch-diameter extraction well screened from 16 to 26 feet bgs. The highest concentration of TPHg in groundwater (9,700 ug/L) was again detected in the groundwater sample collected from Well PZ-1. TPHg and benzene were not detected in the groundwater sample collected from Well EW-1. From August 1990-June 1992, Blaine Tech Services, San Jose, CA sounded, purged and sampled thee to four wells on a quarterly basis. During that time, concentrations of TPHg in groundwater samples collected from Well GX-170A ranged from 2,100 ug/L to 26,000 ug/L. From January-March 1991. Wahler conducted groundwater extraction tests at wells GX- 170A and EW-1. From the test results, it was concluded that the extraction

U001594676

rates for these wells were limited to 0.33 gallons per minute (gpm) and 0.67 gpm respectively, and that one or more additional wells and an extraction trench would be needed to remediate and to exert hydraulic control over the plume. In February 1992, Wahler prepared design plans for constructing a groundwater-extraction trench that would serve to intercept shallow groundwater before it had a chance to migrate off the northern property line. In September-October 1992, EGI performed the following additional site investigations and feasibility studies: (1) advanced twelve direct-push borings to 15-25 feet bgs, collected soil samples at 3-foot intervals, and prepared geologic logs; (2) converted the borings to four 1 -inch-diameter piezometers (PZ-3 through PZ-6) and eight 1 -inch-diameter vapor extraction wells (C-1 through C-8); (3) collected grab-groundwater samples from seven of the new wells and the drainage ditch off the north site boundary; (4) surveyed and sounded all the wells; (5) conducted several preliminary soil-vapor extraction tests; (6) conducted one full day soil vapor extraction (SVE) test using a packaged internal combustion engine-powered SVE system (Remedial Solutions Inc, SAVE Unit); (7) conducted slug testing at three piezometers; and (8) provide certified analyses for four Tedlar Bag samples, sixteen soil samples, seven grab groundwater samples, and one surface-water sample. TPHg was detected in thirteen of the sixteen soil samples within the range of 23 mg/kg to 1,200 mg/kg. TPHg was detected in six of the seven grab-groundwater samples within the range of 60 ug/L to 15,900 ug/L. TPHg was detected in all four soil-gas samples within the range of 60 parts per million by volume (ppmv) to 26,800 ppmv. The surface-water sample tested not detect for all constituents. During the SVE pilot test, the calculated radius of influence was greater than 48 feet. Based on the contaminant distribution, EGI concluded that subsurface releases from historic tank-area and dispenser-area leaks had migrated along the fill/native-soil interface as well as the groundwater interface. From the results of the pilot testing, EGI concluded that dual soil vapor/groundwater extraction would be an effective remedial strategy. EGI also concluded that the bottom sediments in the drainage ditch to the north of the site appeared to be effectively intercepting and blocking the down-gradient migration of the plume. RRM conducted the following well-installation work and associated site investigations within the site boundaries during the course of installing a soil vapor extraction-well network: (1) drilled twenty-six borings to depths of approximately 20 feet bgs; (2) collected soil samples at 5-foot intervals and prepared geologic logs for three of the borings; and (3) provided certified analyses for TPHg and BTEX for five soil samples. TPHg was detected in four of the five soil samples ranging from 3.4 mg/kg to 370 mg/kg. RRM also completed the following investigations to determine if the bottom sediments of the drainage ditch to the north of the site were intercepting the groundwater plume: (1) hand-augured eight exploratory borings to 6 to 10 feet from grade (SB-1 through SB-8); (2) collected eight soil samples and two grab-groundwater samples; and (3) provided certified analyses for TPHg and BTEX. TPHg was detected in seven of the eight soil samples ranging from 1.1 mg/kg to 560 mg/kg. TPHg was detected in both of the grab-groundwater samples at concentrations of 43,000 ug/L and 63,000 ug/L. RRM completed the following additional off-site investigations to define the down-gradient extent of contamination: (1) drilled four borings (EB -1, EB-2, EB-4, and EB-5) on the opposite side of the drainage ditch along the south side of Old County Road; (2) collected

soil samples at 3-foot intervals and prepared geologic logs; (3) collected grab-groundwater samples from two of the borings; and (4) provided certified analyses of TPHg and BTEX for ten soil samples and two grab-groundwater samples. TPHg and BTEX were not detected in any of the soil or groundwater samples submitted for analyses. In April/May/June 1994, RRM conducted the following well-installation and trenching work for the interim-cleanup program: (1) using a direct-push technique, installed seventeen 2-inch-diameter sparge wells (SP-1 through SP-17) to approximately 18 feet from grade; (2) drilled twenty-six borings to approximately 20 feet from grade; (3) completed the borings as 2-inch vapor-extraction wells (VE-1 through VE-26); (4) installed ½-inch-diameter co-extraction drop pipes in all twenty-six "VF and all seven "C" vapor-extraction wells, plus wells GX-170A, GX-170B, PZ-5 and EW-1; (5) constructed a fenced area in the far northern corner of the site to serve as a treatment compound; and (6) installed subsurface and aboveground piping to connect the extraction-well and sparging-well networks to the treatment compound. During this period, RRM also initiated work on securing the necessary discharge permits from the Bay Area Air Quality Management District (BAAQMD) (for discharge of incinerator exhaust to the atmosphere) and the City of San Carlos Public Works Department (for discharge of treated groundwater to the municipal sewer). In May-June 1994, RRM installed the following remediation equipment in the treatment compound: 150 cubic feet per minute (cfm) vacuum pump; water knockout system; 150 cfm catalytic incinerator; flow-equalization tank; sand filters; parallel trains of two-stage activated carbon for water-side treatment (four 55-gallon drums of activated carbon); secondary containment trays; transfer pump; 1-hp oil-less compressor with intake filter and rotometer for air-sparging; and electrical control panel. Instrumentation included totalizing flow meters, automatic shutdowns and restarts from sensors. In May 1995, RRM conducted testing on the sparging wells using compressed air cylinders. The testing indicated that approximately 40 pounds per square inch (psi) would be required to achieve air-flow rates of 0.75 to 1 standard cubic feet per minute (scfm) per sparge well. In May 1995, RRM conducted a baseline-monitoring event during which the 23 wells were sounded, purged and sampled, and soil-gas samples were collected from all the vapor-extraction wells. RRM used a Beckman flame-ionization detector (FID) to measure total volatile hydrocarbons in the extraction wells and provided certified analyses for all the groundwater samples. From the baseline sampling results, RRM prepared isoconcentration maps that showed plumes emanating from both the tank area and the pump-island area. Maximum TPHg concentrations exceeded 20,000 ug/L in the tank area and 50,000 ug/L in the pump island area. In November-December 1994, at the request of the City of San Carlos, Michelucci & Associates Inc, conducted a geophysical investigation to assess the effects on ground settlement of extracting 30 gpm of groundwater. To conduct the investigation, RRM drilled two test borings to approximately 20 feet from grade, collected seven soil samples, prepared geologic logs, and tested one sample from each boring for consolidation characteristics using ASTM Method D4546. Using a worst-case assumption, they determined the maximum potential settlement from consolidation would amount to less than 0.4 inch. They also pointed out that the maximum draw down was within the ordinary range of the seasonal rise and fall of the water table. The coextraction air sparging system operated at the site between January 1995 and December 1996. The system was deactivated between February

and June of 1995 and between February and June 1996 due to increased groundwater elevations that limited the treatment system operations. During the time of operation, hydrocarbon removal rates fluctuated between 0.1 pound per day and 21 0 pounds per day, and benzene removal rates fluctuated between 0.001 pound per day and 1.24 pounds per day. By the end of December 1996, the treatment system had removed approximately 12,000 pounds of petroleum hydrocarbons, including 52 pounds of benzene from the subsurface. In February 1997, RRM submitted a request to the SMCHSA to terminate active remediation based on decreasing trends in influent-hydrocarbon loadings and a dramatic improvement in groundwater quality. With this request, RRM proposed to drill thirteen confirmation borings to assess the effects of the remediation program. In March 1997, after securing the necessary permits, RRM drilled thirteen confirmatory borings (designated borings B-1 through B-13) to depths of approximately 15 feet from grade, collected three samples from each boring. TPHg was detected in seven of the thirty-nine soil samples within the range of 1.7 mg/kg to 110 mg/kg. In March 1997, RRM properly destroyed fifty-three site wells by pressure grouting. At that time, per SMCSHA directives, RRM collected twenty-three additional confirmatory soil samples during site-redevelopment work including seven soil samples during trenching for the removal of old product lines and dispensers, five sidewall/bottom samples for a new lube bay located near the center of the hydrocarbon plume, and eleven soil samples from the lube-bay excavation spoils. The samples from the lube-bay pit and product-line-removal trenches all tested non detect for TPHg and BTEX. TPHg was detected in just one of the eleven excavation spoils samples at a concentration of 3.0 mg/kg. In May 1997, RRM provided for the landfill disposal of 629 cubic yards of excess soils generated from site-redevelopment work at the BFI Ox Mountain landfill. To profile the soils for disposal, RRM collected two 4-point composite samples. TPHg was non-detect and the lead ranged from 4.9 to 8.0 mg/kg. In August 1997, RRM provided for the landfill disposal of an additional 250 cubic yards (344 tons) of excess soils generated from site-redevelopment work at the BFI Ox Mountain landfill. To profile the soils for disposal, RRM collected four 4-point composite samples. The samples tested non detect for all petroleum hydrocarbon constituents. In September-November 1997, RRM repaired wellheads damaged during the site-redevelopment work. In April 1998, RRM re-surveyed wellhead elevations for seven site wells. From September 1997-March 1999, RRM conducted quarterly groundwater-monitoring events for three to seven wells. From June 1999-September 2001, RRM sounded the remaining seven site wells and purged and sampled five wells. To monitor natural attenuation, RRM provided certified analyses of groundwater samples for nitrate, sulfate and ferrous iron, and collected soil-gas samples from the same five wells, field-testing for TVH and methane. RRM also field-tested the groundwater at the same five wells for dissolved oxygen and ORP. To enhance the natural-attenuation process, RRM installed oxygen-release-compound (ORC) socks at well VE-11 at roughly 6-month intervals. In the October 25, 1999 groundwater-monitoring report, RRM recognized a potentially significant increasing trend in MtBE concentrations at Well GX- 170A located immediately down gradient of the existing UST system. In response to these findings Auto Pride personnel visually inspected all tank sumps and dispenser sumps. At this time they also generated TLS 350 leak-detection system alarm-history reports for each

liquid-level sensor. The TLS system monitors six liquid sensors: one in each of the tank sumps, and one for each of the three double-walled tanks (in the space between the walls). There were no indications of any leaks from the tanks or dispensers.

the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months. Returned to compliance on 05/01/2019. Conduct the overfill prevention equipment inspection and submit the report to the CUPA within 30 days. San Mateo County Environmental Health

Violation Date: 03-24-2016

Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)

Violation Description: Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information: (1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed; (2) Hazardous characteristics of the waste(s) to be handled; (3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of: (A) Factors affecting the potential for corrosion, including but not limited to: 1. Soil moisture content; 2. Soil pH; 3. Soil sulfides level; 4. Soil resistivity; 5. Structure to soil potential; 6. Influence of nearby underground metal structures (e.g., piping); 7. Stray electric

Violation Source: CERS

Site ID: 96088
Site Name: AUTO PRIDE CAR WASH
Violation Date: 03-21-2019
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: Returned to compliance on 04/18/2019. Regular UST spill container does not meet the 5-gallon capacity requirement. Replace the spill container with a spill container capable of holding 5 gallons or more and provide confirmation to the CUPA within 30 days that this item was completed. The Supreme spill container failed the hydrostatic test, drain valve repaired, and spill container subsequently passed a hydrostatic test.

prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, - 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes:

Returned to compliance on 05/01/2019. Conduct the overfill prevention equipment inspection and submit the report to the CUPA within 30 days.

Citation:

22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)

Violation Description:

Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information: (1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed; (2) Hazardous characteristics of the waste(s) to be handled; (3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of: (A) Factors affecting the potential for corrosion, including but not limited to: 1. Soil moisture content; 2. Soil pH; 3. Soil sulfides level; 4. Soil resistivity; 5. Structure to soil potential; 6. Influence of nearby

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a site map with all required content.

Violation Notes: Returned to compliance on 03/31/2016. Site map does not indicate petroleum oil and waste oil storage locations for below grade storage room.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 96088
Site Name: AUTO PRIDE CAR WASH
Violation Date: 03-21-2019
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2

Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: Returned to compliance on 04/18/2019. Regular UST spill container does not meet the 5-gallon capacity requirement. Replace the spill container with a spill container capable of holding 5 gallons or more and provide confirmation to the CUPA within 30 days that this item was completed. The Supreme spill container failed the hydrostatic test, drain valve repaired, and spill container subsequently passed a hydrostatic test.

Citation: 22 CCR 15 66265.197 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.197

Violation Description: Failure to properly close a hazardous waste tank system ensuring the minimization of further maintenance and that the following requirements are met: a) the owner or operator shall remove or decontaminate all waste residues, contaminated containment system components (liners, etc.), contaminated soils, and structures and equipment contaminated with waste, and manage them as hazardous waste. The closure plan, closure activities, cost estimates for closure, and financial responsibility for tank systems shall meet all of the requirements specified in articles 7 and 8 of this chapter. b) If the owner or operator demonstrates that not all contaminated soils can be practicably removed or decontaminated as required in subsection (a) of this section, then the owner or operator shall close the tank system and perform post-closure care in accordance with the closure and post-closure care requirements that apply to landfills (section 66265.310). In addition, for the purposes of closure, post-closure, and financial responsibility, such a tank system is then considered to be a landfill, and the owner or operator shall meet all of the requirements for landfills specified in articles 7 and 8 of this chapter. c) If an owner or operator has a tank system which does not have secondary containment that meets the requirements of section 66265.193(b) through (f) and which has not been granted a variance from the secondary containment requirements in accordance with section 66265.193(g), then: 1) the closure plan for the tank system shall include both a plan for complying with subsection (a) of this section and a contingent plan for complying with subsection b) of this section; 2) a contingent post-closure plan for complying with subsection (b) of this section shall be prepared and submitted as part of the permit application; 3) the cost estimates calculated for closure and post-closure care shall reflect the costs of complying with the contingent closure plan and the contingent post-closure plan, if these costs are greater than the

Violation Notes: Returned to compliance on 03/24/2016. Waste oil tank has open container minor violation due to open 6 inch diameter fitting. Fitting replaced during inspection.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

CERS HAZ WASTE:
Name: SMOG X PRESS
Address: 219 OLD COUNTY RD B
City,State,Zip: SAN CARLOS, CA 94070
Site ID: 378119
CERS ID: 10069636
CERS Description: Hazardous Waste Generator

Violations:
Site ID: 378119
Site Name: SMOG X PRESS
Violation Date: 04-28-2014
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 04/28/2014. blue 55 gallon drum used waste coolant was labeled on side with contents, but missing generator info and start date. Properly labeled by inspection conclusion on 4/28/14
Oil caddy label had faded - was replaced by 4/28/14
Violation Division: San Mateo County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 378119
Site Name: SMOG X PRESS
Violation Date: 04-28-2014
Citation: 19 CCR 4 2729.5 - California Code of Regulations, Title 19, Chapter 4, Section(s) 2729.5
Violation Description: Failure to submit inventory reports (Activities, Owner/Operator, Hazardous Materials Descriptions and Map pages, if required. Documentation must be resubmitted (for facilities which exceed EPCRA thresholds) or re-certified (for facilities which do not exceed EPCRA thresholds) by March 1.
Violation Notes: Returned to compliance on 02/11/2015. 55 gallons used oil + caddy 55 gallons waste coolant
Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 378119
Site Name: SMOG X PRESS
Violation Date: 01-10-2019
Citation: 22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Description: Failure to meet the following conditions of satellite accumulation regulations: G Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator. G Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accumulation time at a satellite accumulation point and at a 90/180/270 accumulation area

(depending on size of generator and distance transported), whichever comes first. G The generator complies with section 66265.171, 66265.172, and 66265.173(a). G The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words G Hazardous WasteG including specified information G Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a G 90 dayG accumulation area G 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated

Violation Notes: Returned to compliance on 01/21/2019. Waste oil is disposed of several times per year. The used oil filters and waste antifreeze have not been disposed of in over one year and therefore the maximum waste accumulation storage period was exceeded. Dispose of the used oil filters and waste coolant and provide a copy of the disposal record to the CUPA within 30 days.

Eval Notes: Business owner requested closure inspection for HMBP Program due to below threshold product and haz waste storage amounts. Business has one 55 gallon drum for waste oil, waste antifreeze, and oil filters, respectively. Waste storage is below reportable quantities for each waste type and disposal records show 50 gallon only picked up for each waste type. County EH will close out the HMBP Program at this time. HMBP annual certification is no longer applicable.

 Potential Contaminants of Concern: Gasoline
 Site History: Extracted from RRM's March 16, 2005 Site Conceptual Model, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. The Site comprises an approximately 125-foot-wide by 250-foot-long parcel of land on the north side of Bragato Road, just west of the junction of Bragato Road and Glenn Way in San Carlos. The Site is currently the location of G. Bortolotto & Company, a paving contractor. Current improvements include a 30 by 60 foot office trailer. A former 20 foot long by 30 foot wide cinder-block shed along the rear boundary was removed in 1995. Marion and George Panaretos owned the property back into the 1970s. Marion Panaretos owned the property from 1987 until her death in December 2000. After Marion's death, the Trustee of the Estate transferred the property to Carol Panaretos Kalb (daughter) in March 2002. The Site has been the location of asphalt paving company yard-operations going back at least into the 1950s. Associated improvements/activities have included an office trailer, vehicle and equipment storage, and USTs. The Site was originally part of Bragato Paving Company, currently located next door at 500 Bragato Road. George Panaretos, former President of Bragato Paving Company, took ownership of the 580 Bragato Road property in the 1970s and installed the USTs for use in paving company operations. The current tenant has leased the Site for

S104494377

many years. As of July 1994, Site improvements included six USTs: two 10,000-gallon diesel tanks; one 10,000-gallon gasoline tank; one 1,500 gallon waste-oil tank; one 200-gallon waste-oil tank located in a separate excavation; and one 500-gallon undisclosed tank (believed to be a waste-oil tank) that was discovered during tank removal activities. The tanks were removed in July 1994 and were not replaced. The tank-removal contractor identified the 200-gallon UST as a "solvent tank" without specifying what type of solvents were stored. RRM is aware that solvents are used in the asphalt industry to produce "cutback" mixes. It is RRM's understanding from conducting limited research on the paving industry, that the solvents typically used for this purpose are petroleum distillates including diesel fuel (C10 to C22), Naptha (C4 to C12) and Kerosene C12 to C15). It is RRM's understanding that chlorinated degreasing solvents, such as those used at 641 Quarry Road in the circuit board industry, are not used in the asphalt industry for producing cutback mixes. The current Site owner is not aware of any solvent use at the Site. RRM has not seen any record of solvent use or storage at the Site and is simply speculating as to what solvents would likely have been stored if the 200-gallon tank was indeed a solvent tank used for paving operations. The surrounding land use within a half-mile radius is entirely light industrial. Companies located within 1/8 mile (660 feet) of the Site include the following industrial categories: paving contracting, automotive repair, metal plating, plastics products manufacturing/fabrication, insulation manufacturing/contracting, and warehousing. Phase I site-assessment work conducted by Accutite in 1997 and by RRM in 2003 revealed that the Site is located within a half-mile radius of 34 documented leaking underground storage tanks, nine of which are located within a 1/8-mile radius. These include eight LUFT-release sites involving fuel hydrocarbons and one toxics site involving industrial solvents. This toxics site is by far the most significant of these as discussed below. From the information in the files, there is no reason to believe the releases at the eight LUFT sites impacted the Site groundwater except with respect to MtBE. The 641 Quarry Road site was occupied by a series of electronics companies the last two of which manufactured printed circuit boards. The PC board makers included Circuit Eleven (1972-86) and Support Circuit Systems (SCS) (1987-1990). As of 1992, the facility consisted of a single concrete building with offices, a chemical laboratory, etching area, and wet processing area. A fenced area at the rear of the property was used for chemical waste storage and handling and parts cleaning involving chlorinated solvents. The premises were vacant between 1990 and 1995 and have since been occupied by a motorcycle retailer and carpet layer. Subsurface contamination problems were discovered at the 641 Quarry Road site in 1992-93 during efforts to decontaminate and close the site pursuant to local hazardous materials storage regulations. Subsequent investigations revealed subsurface releases of industrial solvents including the halogenated volatile organic compounds perchloroethylene (PCE) and trichloroethylene (TCE) and their breakdown products including 1,1 and 1,2 dichloroethylene (DCE), 1,1 and 1,2 dichloroethane (DCA), and vinyl chloride (VC). Remedial-response work conducted at 641 Quarry Road between 1994 and 2000 under San Francisco Regional Water Quality Control Board (Regional Board) directives included the following: (1) the removal of a wet-floor and sump system within the building and the associated excavation and off haul of approximately 150 cubic yards of unsaturated contaminated soils below the slab to 3 to 8 feet

from grade; (2) the removal of a system of outdoor sumps and clarifiers located along the eastern property line and the associated excavation and off haul of approximately 100 cubic yards of unsaturated contaminated soils to 3 to 8 feet from grade; (3) the drilling of approximately 55 borings and associated sampling and analytical work, (4) the installation and quarterly to semiannual sampling of seven groundwater monitoring wells; and (5) the installation and three-year operation of groundwater-extraction and soil vapor extraction (SVE)/treatment systems from 1997 to 2000. The monitoring wells were installed in 1996, which was three years after the remedial excavation work was completed; therefore, the associated monitoring data represents post-interim cleanup conditions. To date, subsurface investigations have not been conducted to delineate the extent of soil and groundwater contamination to the east (down-gradient) of the 641 Quarry Road site. In addition, a final remedial action plan that called for in-situ chemical oxidation, which was prepared for the site in February 2000 has not yet been implemented. The records suggest that excavated HVOC-impacted soils with detectable levels of HVOCs well in excess of 1 parts per million (ppm) were left in place beyond the eastern border of the property and presumably remain in contact with shallow groundwater. The record further suggests that excavated soils containing up to 1,000 parts per billion (ppb) of total HVOCs were used to backfill the excavations. The primary HVOCs in soils and groundwater at 641 Quarry Road are cis 1, 2 DCE and TCE. San Francisco Regional Water Quality Control Board February 2005 environmental screening levels for these compounds, based on leaching potential to potable groundwater, are 190 and 460 ppb respectively.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PENINSULA LABORATORIES INTERNATIONAL INC (Continued)

S121768670

Site ID: 369791
Site Name: PENINSULA LABORATORIES INTERNATIONAL INC
Violation Date: 05-18-2017
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 06/07/2017. One 55-gallon drum of hazardous waste (mixed waste following decay cycle) has lid on drum but ring is not in place. In addition, approximately 10 universal waste lamps are not placed in a closed container. Ensure that all hazardous waste containers are closed except during waste transfer activities.

Violation Description: 6.95, Section(s) 25508(a)(1)
Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: Returned to compliance on 08/23/2019. Liquid carbon dioxide is not reported correctly. Liquid carbon dioxide must be reported as a liquid in gallons. Revise HMBP and submit revisions to CERS within 30 days.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 184611
Site Name: MCDONALDS
Violation Date: 03-22-2017
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.

Violation Notes: Returned to compliance on 04/20/2017. HMBP must be reviewed, revised if necessary, and submitted each year to comply with annual certification requirement.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 184611
Site Name: MCDONALDS
Violation Date: 03-22-2017
Citation: HSC 6.95 25505.1 - California Health and Safety Code, Chapter 6.95, Section(s) 25505.1

Violation Description: Failure to notify property owner in writing that the business is subject to the business plan program and has complied with its provisions.

Violation Notes: Returned to compliance on 06/05/2018. It appears that business does not own the property and therefore, HMBP property owner notification letter must be provided to property owner. CUPA will email example letter that can be used to meet the property owner notification requirement.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 184611

Violations:

Site ID: 564270
Site Name: First Student, Inc. #12601
Violation Date: 10-08-2020
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 11/06/2020. Provide new hire and annual hazardous materials safety and emergency procedures training to all employees that work on-site and provide a record of the training activity to the CUPA within 30 days.
Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-08-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: I conducted an inspection on-site of the bus and vehicle repair shop hazardous waste storage locations. I didn't observe any signs of spills or leaks in the maintenance shop or adjacent hazardous materials product and hazardous waste storage area.

Violation Source: CERS

Site ID: 76801
Site Name: TNT DEMOLITION
Violation Date: 06-26-2018
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 06/26/2018. One waste fluorescent lamp box was open and one 55-gallon drum of used oil was open at the time of the inspection. Both containers were closed during the inspection and the minor violations were corrected.
Violation Division: San Mateo County Environmental Health

S101441699

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to establish and electronically submit an adequate training program in safety procedures in the event of a release or threatened release of a hazardous material.

Violation Notes: Returned to compliance on 06/11/2017. Include training program in HMBP for all employees that meets HMBP training program requirement. CUPA will provide training program guidance document and documentation form for your review and use if needed.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 173591
Site Name: TACO BELL #30796
Violation Date: 03-27-2017
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit a site map with all required content.

Violation Notes: Returned to compliance on 06/11/2017. Provide a site map with the revised HMBP that includes all required information, at a minimum. CUPA will provide a site map guidance document.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 173591
Site Name: TACO BELL #30796
Violation Date: 03-27-2017
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)

Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

Violation Notes: Returned to compliance on 08/21/2019. Keep record of hazardous materials safety and emergency procedures training activities available for inspection.

Violation Division: San Mateo County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 173591
Site Name: TACO BELL #30796
Violation Date: 04-18-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.

Violation Notes: Returned to compliance on 05/08/2019. The Emergency Response Plan Section is not current since the old version of the CERS Consolidated Emergency Response/Contingency Plan is still in use. Revise the HMBP using the attached template form and submit a revised HMBP to CERS within 30 days.

Violation Notes: Returned to compliance on 08/21/2019. Employee training records were not available at the time of the inspection. Provide hazardous materials safety and emergency procedures training to all employees, initially for new employees and annually thereafter, and document training activities. Provide a copy of a current training record and any similar training records from the last two years to the CUPA within 30 days. Note - this was a minor violation observed during the last HMBP Program inspection conducted in 2017 and this earlier violation has not been corrected to date. Failure to provide the required employee training to all employees that work on site may lead to an enforcement action with potential penalties.

Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.5090449879022
Longitude: -122.261803150177
Case Type: Cleanup Program Site
Case Worker: PF
Local Agency: Not reported
RB Case Number: 41S0184
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Under Investigation
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Diesel, Gasoline
Site History: This 9-acre redevelopment project (Site) near the San Carlos Caltrain Depot is a narrow northwest-southeast trending strip of land 150-foot wide and nearly 2,100-ft long, sandwiched between El Camino Real and the Caltrain tracks, and bisected into northern and southern portions by Holly Street. Historical businesses at the Site from the 1940s -1990s included gas stations, auto service/sales, a car wash, a lumber storage yard, a landscape nursery and a rail spur. Between 1986 and 2004 petroleum hydrocarbons from USTs were found in soil and GW, and volatile organic compounds (VOCs) in groundwater. Between 1995 and 2004, the San Mateo County Health Services Agency closed the UST release cases. In 2009, prior to development of the San Carlos Transit Village, soil, soil gas (SG), and GW investigations were conducted to assess whether residual petroleum hydrocarbons and hazardous substances remained beneath the Site. The investigation found petroleum hydrocarbons in soil and GW, and VOCs in SG and GW. VOCs are likely associated with upgradient off-Site sources. Based on the March 2015 Revised Site Management Plan (SMP), between January-March 2016 approximately 1,150 cubic yards of soil were excavated from the northern half of the site, down to depths ranging from 5 to 11 feet below grade. Sub-slab vapor mitigation systems were also put in place below buildings in the northern section based on the SMP.

BIG OAK HARDWOOD FLOOR CO INC (Continued)

S101641814

Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Dichloroethane (DCA), Dichloroethene (DCE), Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: This site has had circuit board manufacturers operating at the facility dating back to the 1960s; Diamond Electronics (? - 1969); Electro Chemical Process Engineering (1969 - 1971); Circuits Eleven (1972 - 1986); Support Circuit Systems (1987 - 1990). Investigations detected significant levels of VOCs in soil and groundwater as a result of these operations. Interim remedial measures conducted in the early to mid-1990s included the excavation of unsaturated soil in the rear of the property, both inside and outside the building. Further investigations are currently underway.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Case Type: Cleanup Program Site
 Case Worker: Not reported
 Local Agency: Not reported
 RB Case Number: Not reported
 File Location: Local Agency
 Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
 Potential Contaminants of Concern: Diesel, Waste Oil / Motor / Hydraulic / Lubricating
 Site History: Extracted from Clearwater's December 4, 2009 Soil and Groundwater Investigation Report, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. (Goodyear) performed an end-of-lease environmental report. Goodyear engaged SECOR International, Inc., of Mountain View, California, to perform a Phase I Environmental Site Assessment and Limited Subsurface Investigation (ESA) on the Site for which SECOR produced their report in April 2006. In that report, several items were considered to qualify as recognized environmental conditions (RECs). Through the subsurface part of their work, SECOR was able to identify only the oil/water separator (OWS), of the several RECs, as having impacted the environment. A limited subsurface investigation of soil and groundwater adjacent to the OWS was conducted, by SECOR (ESA, referenced above); this investigation confirmed that soil and groundwater had been impacted by a release of total petroleum hydrocarbons diesel range organics (TPH DRO) and of total petroleum hydrocarbons oil range organics (TPH ORO). Analytical results from the soil and groundwater samples collected adjacent to the oil/water separator were above ESLs [environmental screening levels] suggesting

U001594700

that operation of the oil/water separator has impacted the environment. TPH DRO was measured at 33,400 micrograms per liter ("g/L) in boring OWS-1. TPH ORO was measured at 30,100 micrograms per liter ("g/L) in boring OWS-1. In September 2006, a second subsurface investigation was conducted at the Site by SECOR for Goodyear cite and reported in Phase III Further Site Investigation Report, dated November 1, 2006. All 12 soil samples were below the current ESLs. Of the 5 groundwater test samples, the only analytical which was run and was over the ESL was the TPH-residual fuels test (both samples run for DRO/ORO were over the ESL of 100 "g/L). The water samples which had readings over the ESLs, were located north and west of the OWS. In June 2007, an additional subsurface investigation was conducted by Piers Environmental Services, Inc., in the area of the OWS to further characterize the horizontal and vertical extent of the contamination. Six exploratory soil borings were installed on the property. Petroleum hydrocarbons were not detected in any of the soil samples. Diesel and motor oil were detected in four of the five grab groundwater samples. Diesel values in groundwater ranged from 110 micrograms per liter ("g/L) to 3,300 "g/L. Motor oil values in groundwater ranged from 650 "g/L to 25,000 "g/L. Plans were made for the removal of the OWS. On June 15, 2007, in preparation for the removal of the OWS, an excavation was completed around it. In preparation for installing shoring, an excavation to 11 feet below ground surface (bgs) was dug between the OWS and the building. A soil sample was collected from this location. Analytical results from this soil sample were non-detectable for diesel and motor oil. On June 28, the 200-gallon OWS was removed from the Site. Soil samples were taken from the sidewalls and bottom of the excavation pit. Contaminated soil was encountered directly beneath the separator and was excavated to approximately 12 feet bgs. Diesel and motor oil were detected in two of the sidewall samples, ranging from 2.4 milligrams per kilogram (mg/Kg) to 31 mg/Kg, indicating that additional over-excavation would not remove significant source material for the groundwater contamination; the detected soil levels were sufficiently low that the soils would not be considered a significant source for groundwater contamination. Results of the groundwater sample taken from the tank pit indicated a concentration in groundwater of total petroleum hydrocarbons as diesel (TPH-d) and motor oil (TPH-mo) of 310 "g/L and 1,100 "g/L, respectively. On the basis of a failed pressure test of the 4-inch sewer lateral draining the surface of all the service bays in the building, the 4-inch auto repair bays lateral (BL2) pipe was removed, and the 2-inch drain lines from the work stations in the six bays were tested. During removal of the pipe, an area of impacted soil was encountered near the exit of the pipe from the building, and the underlying soil over-excavated. Five soil samples were collected from the area. The results indicated that the level of TPH-d ranged from 18 mg/Kg to 260 mg/Kg, and the level of TPH-mo ranged from 52 mg/Kg to 550 mg/Kg. At an additional area, at the rear of the building near the location of the 4-inch rear building lateral (BL1) connection to the 4-inch BL2 pipe, impacted soil was observed. Four additional soil samples were taken. It was determined that when the BL1 lateral was cut, water that had been jetted into the piping system was released with a small amount of oil (which appeared to have been removed during excavation). On August 8, 2007, a new OWS was installed, along with new BL2 piping. Through additional investigative work, the impacts to soil and groundwater were found to be the result of a combination of breach in the piping

of the OWS and leaking 4-inch piping laterals, BL1 and BL2, from the service bays to the OWS. In September 2007, the final report summarizing this subsurface investigation and OWS (and piping) replacement procedure recommended that the local regulatory oversight agency issue a case closed status for the site, based on the determination that the source of the contamination had been removed, and the contamination levels would thus decrease over time owing to natural attenuation. The Local Oversight Program (LOP) refused to grant a case closed status for the Site, stating that more soil and groundwater testing was necessary to delineate contamination on-site. While installing a new bathroom during site modification work in late 2007, the new tenant discovered that the 4-inch, cast iron pipe (BL3, BL4) from the OWS to the City main (in which piperun the Y-connection from the office bathroom was located) had corroded completely through the bottom of the pipe. The cast iron pipe was replaced with a 4-inch polyvinyl chloride (PVC) pipe from the OWS to the sidewalk (and property line). The pipe was not replaced all the way to the main City sanitary sewer main, but was tied back into the original cast iron pipe at the property line. The slope of the pipe was noted by the contractor to be very flat, owing to the low elevation of the outlet on the OWS, relative to the elevation of the City main sewer pipeline. Clearwater was retained to perform the next step of the remediation process to move the site toward case closure. Clearwater's Work Plan was submitted to San Mateo County Public Health and Environmental Protection Division (SMCPH), and approval for the proposed investigation work was received in January 2009.

Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: EPA ID number CAL000289171 ACTIVE. No manifests on HWTS. No waste has been shipped in a while. Jobs do not generate waste on a regular basis. No hazardous waste on site at the time of the inspection. Several items are being collected that could be re-used, but when they are no longer able to be used, dispose of all chemicals properly. Chemicals can be taken to the County Very Small Quantity Generator disposal site on tower Rd. Call 650-372-6200 to make an appointment or visit <https://smchealth.org/vsqq> for more information on the program. Latex paint waste can be taken to any paint care facility for free. Recommend keeping documentation of all waste disposed of at paint care facilities.

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RB Case Number: 41-0834
Local Agency: Not reported
File Location: Local Agency
Local Case Number: 120030
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:

Extracted from ECM Group's February 25, 2009 Workplan for Subsurface Investigation, San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. Two underground storage tanks (USTs), one containing diesel fuel and one containing gasoline fuel, were formerly located at the site. Age of the former USTs is unknown. The USTs were removed in 1997. A limited overexcavation (approximately 80 CY of impacted soil) was conducted around the gasoline UST at the time of the removal. 11 Eleven groundwater monitoring wells (MW-1 through MW-11) and 14 extraction wells (VES-1 through VES-14) have been installed on-site. Product at the site is composed of gasoline-range hydrocarbons, with high relative concentrations of MTBE. Minor concentrations of hydrocarbons in the diesel range have been detected. Oxygenates other than MTBE have not been detected, although detection limits have often been raised due to high concentrations of MTBE. Land use in the surrounding area consists primarily of mixed-use light industrial and retail. The nearest drainage is the adjacent Belmont Creek channel on the northwest property line. The nearest permanent body of water is the Belmont Channel, 2,500 feet to the northeast. Belmont and Phelps Sloughs are located approximately 3,500 feet to the north and east, respectively, and San Francisco Bay farther to the northeast. The historic margin of San Francisco Bay tidal flats is approximately 1,400 feet to the northeast, at the approximate present location of US Highway 101. Site monitoring wells have been monitored since UST removal in 1997. A remediation system, consisting of a 2-HP regenerative blower which extracted impacted vapor from 14 extraction wells (VES-1 through VES-14) and three monitoring wells (MW-2, MW-6 and MW-7) was activated at the site in February, 2003. The system was shut down in April 2005 due to failure of the regenerative blower. An inspection in September 2005 found that the blower was inoperative due to a burned main motor bearing and housing. The system was upgraded in 2007. The current system applies vacuum to the extraction wells using an oil-sealed, liquid-ring vacuum blower. The system supplies sufficient vacuum to dewater the wells, allowing for extraction of contaminated soil vapor and liquid. Details of system operation and

performance are included in the most recent Groundwater Monitoring Report/Remedial System Operation and Maintenance Report, dated January 30, 2009. A Tier II Risk-Based Corrective Action (RBCA) evaluation was prepared by Hoexter Consulting, Inc. in 1999.2 Data from the proposed investigation will be used to update the RBCA evaluation as appropriate.

Violations:
 Site ID: 11079
 Site Name: BARTLETTS AUTO BODY
 Violation Date: 09-05-2013
 Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
 Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
 Violation Notes: Returned to compliance on 09/05/2013. Complied during inspection. Note that not "empty" containers were found in the trash. Discussed the DTSC definition of empty and what to do with hazardous residues.

File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Not reported
Site History: Light industrial use started here about 1948 when a Masonite door assembly business purchased and occupied the property. A title search indicated that the property was purchased by the Tiegel family in 1955, which began and continues to manufacture various machine parts and specialty equipment. Between 1955 and 1988, portions of the property were leased to a variety of small business tenants. Most tenants used the property as a storage yard for construction equipment. One of these, Empire Builders, owned and operated a 500-gallon above-ground storage tank (AST) for diesel and motor oil. This tank was removed along with some impacted soil in the 1980s. Other previous tenants included a small auto mechanic shop, a house painter, a small cabinet making business, and a small business that assembled electronic components onto circuit boards. A 550-gallon gasoline underground storage tank (UST), which had been installed sometime in the 1970s, immediately south of the main building, was removed in December 1988. From these past operations soil and groundwater have been contaminated, investigations have been occurring since 1993. Delta Star and Tiegel Manufacturing Company are currently negotiating a remedial action plan for PCBs.

LUST REG 2:

Region: 2
Facility Id: 41-1173
Facility Status: Preliminary site assessment workplan submitted
Case Number: 129006
How Discovered: Tank Closure
Leak Cause: UNK
Leak Source: UNK
Date Leak Confirmed: 8/16/1996
Oversight Program: LUST
Prelim. Site Assesment Wokplan Submitted: 1/6/1997
Preliminary Site Assesment Began: Not reported
Pollution Characterization Began: Not reported
Pollution Remediation Plan Submitted: Not reported
Date Remediation Action Underway: Not reported
Date Post Remedial Action Monitoring Began: Not reported

SLIC REG 2:

 Lead Agency: SAN MATEO COUNTY LOP
 Lead Agency Case Number: 779100
 Latitude: 37.51711
 Longitude: -122.26438
 Case Type: Cleanup Program Site
 Case Worker: BG
 Local Agency: SAN MATEO COUNTY LOP
 RB Case Number: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
 Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE), Copper, Lead, Nickel, Other Metal
 Site History: Site used by sheet metal company for approximately 20 years. Vacagted property in 2015 and subsurface investigation was conducted and found soil, groundwater and soil vapor impacts at the property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Document Type: Certification
Completed Date: 03/08/1984
Comments: Certified Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Discovery
Completed Date: 07/01/1983
Comments: In January of 1980, the San Francisco Bay Regional Water Quality Control Board (RWQCB) inspected the Site and observed leachate runoff from the pond, and oil and detergent leakage from barrels stored on-site. The Department of Health Services, Toxic Substances Control Division (DHS, currently DTSC) inspected the Site in June of 1981 and March of 1983. Samples were collected during both events from the drum storage area, grinding residues, and a railroad embankment adjacent to WGS. Lead, zinc, nickel, copper, chromium, and oil and grease were detected, with lead as high as 1120 parts per million (ppm) and chromium as high as 6670 ppm. In July of 1983 DHS directed WGS to remove the contaminated soil from on and off its property.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 02/10/1984
Comments: Completed RA. Approximately 150 cubic yards of soil was removed from the drum storage area, pond, and railroad embankment. Post-excavation confirmation samples were taken for lead, chromium, zinc, and nickel, and the residual levels detected were below standards considered safe for residential use.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 07/16/2002
Comments: Cleanup activities took place in the past. No further work is required at that site.

Background Info: From 1953 until the present, Western Grinding Services (WGS) operated a machine shop at the Site that produced precision ground and machined parts for various industries. Activities at the Site prior to 1953 are unknown. Chemicals used included coolants, lubricants and corrosion resistant chemicals. Metal grinding residues are a by-product of the grinding process. Grinding residues were disposed in an on-site pond behind the facility. In January of 1980, the San Francisco Bay Regional Water Quality Control Board (RWQCB) inspected the Site and observed leachate runoff from the pond, and oil and detergent

Environmental Interest/Information System:

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Gasoline
Site History:

Extracted from Cambria's March 9, 2009, Site Assessment Report. San Mateo County does not take responsibility for the accuracy of the statements made or any professional interpretations made in the referenced report. A Shell Oil Company (Shell) service station began operation at the site in approximately 1970. The Shell USTs were located near the western portion of the site, one dispenser island was located adjacent to the USTs and two additional dispensers were located just southeast of the existing southernmost dispenser island. Details regarding the removal of the Shell USTs and fuel dispenser equipment are not available. In 1982 Peninsula Oil Company leased the site from Jawalmar, Inc. and installed four 10,000-gallon,

single-walled, fiberglass USTs along the northern portion of the site. Spill containment and overflow prevention equipment was subsequently installed in 1998. In 2003 the site operations were sold to Nella Oil Company (Nella) with Jawalmar, Inc. remaining as the property owner. In December 2003 the four USTs were removed and replaced with two double-walled fiberglass USTs. Additionally, the piping and dispensers were modified or replaced to adhere to current UST system regulations. In January 2003, GHH Engineering, Inc. (GHH) conducted a baseline environmental study. Soil and groundwater samples were collected from nine borings (SB-1 through SB-9) to establish a baseline of soil and groundwater conditions. Soil sample analytical results revealed that elevated concentrations of total petroleum hydrocarbons (TPH) as gasoline (TPHg), TPH as diesel (TPHd), and/or methyl tertiary butyl ether (MTBE) were present at shallow depths in borings SB-1, SB-2, SB-3, SB-4, SB-7, and SB-9. Grab groundwater samples collected from borings SB-1, SB-3, SB-4, SB-7, SB-8, and SB-9 had elevated concentrations of TPHg, TPHd, MTBE, and/or tertiary butyl alcohol (TBA). Grab groundwater from borings SB-4 and SB-7 were also analyzed for chlorinated solvents. Analytical results indicated that no dissolved-phase chlorinated solvents were present onsite, in the vicinity of borings SB-4 and SB-7. Groundwater samples were not collected from borings SB-2 and SB-5 due to the absence of groundwater in the boring. GHH reported that petroleum hydrocarbon impact to soil and groundwater was present in the vicinity of the dispensers, product lines, and the USTs (GHH, 2003). GHH recommended additional assessment to delineate the extent of contaminated soil and groundwater. In September 2003, Cambria conducted a geotechnical investigation on behalf of Nella. Soil and grab groundwater samples collected during the investigation were submitted to the laboratory for analysis. The geotechnical investigation was performed to facilitate permitting related to upcoming UST replacement activities. Soil borings B-1 and B-2 were drilled to 15.5 and 20.5 ft bgs, respectively, in the northern portion of the site (Figure 2). TPHg and TPHd were detected at concentrations of 270 and 6,600 milligrams per kilogram (mg/kg), respectively, in a soil sample collected at 6.5 ft bgs from B-2. TPHg and/or TPHd were also detected in grab groundwater samples collected from B-1 and B-2. TPHg was detected in B-2 at a concentration of 68 micrograms per liter (µg/L). TPHd was detected at concentrations of 5,100 and 198 µg/L in B-1 and B-2, respectively. In December 2003, Cambria collected compliance soil samples in conjunction with UST replacement activities. Three soil samples were collected from the tank pit sidewalls; one soil sample was collected from beneath each of the nine former dispensers; and twelve soil samples were collected from beneath the product piping. All compliance soil samples were collected at the direction of Mr. Ken Robinson. Cambria installed five onsite monitoring wells to determine the groundwater gradient and to further characterize the extent of contamination in soil and groundwater. On December 1 and 2, 2004, groundwater monitoring wells MW-1 through MW-5 were installed at the site (Figure 2). MW-1, MW-3, MW-4, MW-5 were constructed of 2-inch diameter, flush-threaded, schedule 40 PVC well casing, and MW-2 was constructed of 4-inch diameter, flush-threaded, schedule 40 PVC casing. TPHg and TPHd were not detected at elevated levels except for in boring MW-4 where a concentration of 1,400 mg/kg was detected in the 9.5 ft sample. No BTEX, di-isopropyl (DIPE), and ethyl tertiary butyl ether (ETBE) were detected in any of the soil samples. MTBE and TBA were detected in

soil samples from borings MW-2, MW-4, and MW-5. MTBE concentrations ranged from 0.013 to 0.76 mg/kg and TBA concentrations ranged from 0.09 to 1.6 mg/kg. Tertiary amyl methyl ether (TAME) was detected at concentrations of 0.03 and 0.0062 mg/kg in samples, MW-5@8.5' and MW-5@ 13', respectively. Soil borings B-3 through B-10 were drilled on November 14 and 15, 2005. Monitoring wells MW-6 through MW-9 were drilled and installed on November 28 and 29, 2005.
